Notes: 1. Wire colors, except flipper Orn-Vio and Orn-Gry, are ground connections (to coil terminal with unbanded end of diode). Flipper Orn-Vio and Orn-Gry wires connect from CPU Board to flipper switch. 2. Flipper connections shown in braces are from flipper switch to flipper coil. 3. "A" circuits are pulsed, when Sol. 12 is de-energized; "C" circuits are pulsed, with Sol. 12 energized. Wire colors in brackets are those from respective A and C terminals corresponding to the J1-terminal connection listed for the Aux Power Driver Bd, which controls the device pulsing by Sol. 12. 4. Relay is mounted on Backbox Interconnect Bd, p/n D-12112. 5. Relay is mounted on Aux Power Driver Bd, D-12247 in the backbox. 6. Relay is mounted on Relay Bd, C-11902-1.

BANZAI RUN (System 11B) ROM Summary

IC	DESCRIPTION	TYPE	IDENTIFIER	BOARD	PART NUMBER
Game ROM 1	32K x 8 ROM	27256	U27	CPU	A-5343-566-2
Game ROM 2	16K x 8 ROM	27128	U26	CPU	A-5343-566-1
Sound ROM 1	32K x 8 ROM	27256	U21	CPU	A-5343-566-4
Sound ROM 2	32K x 8 ROM	27256	U22	CPU	A-5343-566-3
Music/Speech ROM 1	32K x 8 ROM	27256	U4	Audio	A-5343-566-5
Music/Speech ROM 2	32K x 8 ROM	27256	U19	Audio	A-5343-566-6
Music/Speech ROM 2	32K x 8 ROM	27256	U20	Audio	A-5343-566-7

NOTICE

To order a replacement ROM from your authorized WILLIAMS ELECTRONICS GAMES distributor, specify: (1) part number (if available); (2) ROM label color; (3) ROM level (number) on the label; (4) which game the ROM is used in.

CONNECTOR IDENTIFICATION

WILLIAMS ELECTRONICS GAMES uses a special technique to identify connectors. Each plug or jack receives a prefix number (which identifies the circuit board), a letter, and a number. J-designations refer to the male part of a connector. P-designations refer to the female part of a connector. For example, 1J1 designates jack 1 of board 1 (a CPU Board jack); 3P6 designates plug 6 of board 3 (a Power Supply Board plug).

Identifying the specific pin number of a connector involves a hyphen, which separates the pin number from the plug or jack designation. For example, 1J1-3 refers to pin 3 of jack 1 on board 1.

BANZAI RUN CIRCUIT BOARDS

System 11B Circuit Boards are in the *BANZAI RUN* backbox, behind the upper playfield. They are accessible by (a) unlocking and raising the marquee, and latching its support arm; (b) *pressing the Ball Lifter motor switch briefly to raise the Ball Lifter to clear the lower playfield*; and (c) unlatching the upper playfield and carefully tilting it forward onto the lower playfield.

CPU BOARD. The System 11B CPU Board (p/n D-11883-566) must be equipped with the ROMs specified in the *BANZAI RUN* (System 11B) ROM Summary. For this ROM complement and CPU Board, jumpers W1, W2, W4, W5, W7, W8, W11, W14, W16, W17, and W19 must be connected.

BACKBOX INTERCONNECT BOARD. The Backbox Interconnect Board is D-12112.

AUDIO BOARD. The Audio Board is p/n D-11581-566, as supplied with ROMs and micro-processor.

MASTER DISPLAY BOARD. The Alphanumeric Master Display Board is p/n D-10877. This board is mounted on the interior side of the Score Display & Lamp Board Assembly, D-12146, mounted in the marquee, just behind the marquee glass.

POWER SUPPLY BOARD. The Power Supply Board is p/n D-8345-566.

AUX POWER DRIVER BOARD. The Aux Power Driver Board is D-12247-566.

Prefix numbers for the System 11B circuit boards and other major assemblies are listed below. A prefix number may precede a component designator to identify the unit (e.g., connector 1J1).

| 4 - Alphanumeric Display | 8 - Playfield | |

BANZAI RUN GAME CONTROL LOCATIONS

The On-Off switch is on the bottom of the cabinet near the right front leg.

The Volume Control is on the left inner wall of the cabinet on the tilt mechanisms board. It is accessible by opening the coin box door.

The Credit switch is a pushbutton to the left of the coin door on the cabinet exterior.

GAME ADJUSTMENT/DIAGNOSTIC SWITCHES. *BANZAI RUN* allows the operator to program virtually all game adjustments, obtain bookkeeping information, and diagnose problems, using only three switches mounted on the inside of the coin door and the Credit button beside the coin door.

ADVANCE, AUTO-UP/MANUAL-DOWN, and HIGH-SCORE RESET are the switches located on the inside of the coin door. Refer to the Game Status Displays text and the Text/Diagnostic Procedures for details concerning their operation.

The Memory Protect switch is on the inside frame of the coin door. This interlock switch must be open to clear bookkeeping totals and to make game adjustments. It automatically opens, when the coin door opens.

The CPU Diagnostic switch (SW 2) is the lower switch (of the two switches mounted on the left edge of the CPU Board) near a large, socketed microprocessor chip. This switch initiates the Memory Chip Test explained in the Test/Diagnostic Procedures.

The Sound Diagnostic switch (SW 1) is the upper switch of the two mounted on the left edge of the CPU Board. This switch initiates the Sound Section Test. Refer to the Test/Diagnostic Procedures.

The Ball Lifter switch is on the lower left of the upper playfield just to the right of the Ball Lifter Magnet. The Ball Lifter *MUST BE RAISED ENOUGH TO CLEAR THE LOWER PLAYFIELD*, before moving the upper playfield for servicing.

BANZAI RUN GAME ASSEMBLY INSTRUCTIONS

1. Open the shipping container; remove all cartons, parts, and other items, and set them aside. Read the Warnings and Cautions labels and documents on and IN the game.
2. Place the game cabinet on a support and open the coin door; unlatch and remove the Front Molding Assembly to allow removing the lower playfield glass. This allows access for later game adjustments, lubrication, etc.
3. Attach the rear legs (after installing leg levellers), using leg bolts. Leg levellers and leg bolts are both provided among the parts in the cash box. Attach the front legs (after installing leg levellers), using leg bolts. See Figure 1 for details.

Figure 1. Pinball Assembly, Playfield Pitch Angle, and Leg Leveler Details.

4. Reach into the cabinet and backbox and check the mating of the interconnecting cables, matching several wire colors at each connector. Ensure that all connections are properly secure.

CAUTION

Ensure that the interconnecting cables are free to move (not kinked or pinched). Be careful not to damage wires at any stage of the assembly process.

5. Take the two 2" black carriage bolts and, after swinging the hinged backbox upright, stabilize it in position, while placing one carriage bolt up to its head through the locking hole on each side of the lower apron sides of the backbox into the cabinet.

WARNING

NEVER transport a pinball game with the hinged backbox erect. Always lower the backbox forward onto the playfield cabinet on a layer of protective material to prevent marring or damage and possible personal injury.

BANZAI RUN GAME ASSEMBLY INSTRUCTIONS (Continued)

6. Unlock the marquee and raise it until the hinged marquee support arm (interior right side) is accessible; lock the marquee arm in its straight position. Reach in the backbox and unlatch the upper playfield. Tilt the upper playfield forward and carefully lay it on the lower playfield glass. On each of the two inserted carriage bolts protruding through the inside cabinet wall, place a flatwasher, a lockwasher, and a wingnut. Secure the upright backbox by tightening the wingnut.
7. While accessible, ensure that the pivot bracket of the Freestyle kickbig on the upper playfield is adequately lubricated to provide proper operation. **NOTE:** Satisfactory operation of the Kickbigs, Kickers, and Eject Holes devices on both the upper and lower playfields is **EXTREMELY IMPORTANT** for proper game play. An essential means of keeping these devices operating is **LUBRICATION**.
8. Tilt the upper playfield up, raising it until its playfield glasses can be moved safely. Detach the black plastic glass protector strip from the bottom of the glasses (see Figure 2, left view); place this protector strip inside the game for later use, as necessary. Slide the playfield glasses up until the captured ball area of the playfield is accessible. Install the smaller ball (from among the parts in the cashbox) in the Freestyle area. Remove the foam holding the captured ball in its playfield (upper center) location. Locate the stainless steel Barrier Molding Assembly (in the game legs box); the Barrier Molding Assembly replaces the black plastic glass protector strip (removed earlier). Clean the playfield glasses and slide them downward in the mounting grooves, until they are properly located in the Barrier Molding Assembly (as shown in Figure 2, right view).

Figure 2. Upper & Lower Playfield Glasses Assembly Details

CAUTION

NEVER raise or lower the backbox with the steel Barrier Molding Assembly attached to the upper playfield glasses.

9. On the lower playfield, remove the foam holding the captured ball in its playfield location. Ensure that the pivot brackets on the Kickbig, Eject Holes, and Kickers are properly lubricated to provide the desired device operation. (Refer to step 7 NOTE.) While the playfield can be moved, lift it and assemble the Plumb Bob Tilt mechanism on the leftside interior panel of the game cabinet. Adjust this tilt for proper operation *after* the lower playfield pitch angle adjustment is completed. (Refer to **CAUTION** following step 11.)
10. Extend each leg leveler *slightly* below the leg bottom, so that all four foot pads are extended about the same distance. Remove the cabinet from its support and place the game on the floor.

BANZAI RUN GAME ASSEMBLY INSTRUCTIONS (Continued)

11. Adjust the leg levelers for proper playfield level (side-to-side) *and* playfield pitch angle (incline) of approximately 6 to 6-1/2 degrees. (It is recommended that these measurements be made ON the playfield, not the cabinet nor the playfield cover glass.) NOTE: 6-1/2 DEGREES IS THE RECOMMENDED MAXIMUM ANGLE. THE LOWER PLAYFIELD'S LEFT BALL GUIDE AT THE EXIT OF THE RAMP MAY REQUIRE ADJUSTMENT TO RETURN THE BALL TO THE MIDDLE OF THE RIGHT FLIPPER PADDLE IF A GREATER ANGLE IS USED. Tighten the nut on each leg leveler shaft to maintain this setting, as shown in Figure 1.

CAUTION

Playfield pitch angle adjustments can affect the operation of the plumb bob tilt, inside the cabinet. The operator should adjust this tilt mechanism for proper operation, after completion of the desired playfield pitch angle setting.

12. Move the game into the desired location; recheck the level and pitch angle of the playfield. To verify that the game's playfield is properly aligned for good play, remove the lower playfield glass and place a ball just left of center of the plastic runway.

NOTE

For good play, the ball should roll from a standing start down the runway exit, along the curved left ball guide to the center of the right flipper paddle. Adjust the curved left ball guide to provide this ball pathway. Also, check that the alignment of the 'Ball Cannon' (Kickbig near the lower left return lane) causes a ball shot to strike the captured ball on the lower playfield; adjust via the nuts atop the Ball Cannon plastic cover.

13. Place the **required number** of balls in the game. (*BANZAI RUN*: 3 balls into outhole of lower playfield. Also, verify that 1 smaller ball was installed in the Freestyle area of the upper playfield (step 7). Verify that one ball is retained in the captured ball runway (upper center) of the upper playfield (step 7) and that one ball is retained in the leftside captured ball runway of lower playfield (step 9), after removal of their sleeve holders.)
14. Clean and re-install the playfield cover glasses. Ensure that the black plastic Lower Playfield Glass Molding Strip is located on the top edge of the lower playfield glass. Slide the Lower Playfield Glass upward in its mounting grooves, until it is firmly against the Barrier Molding Assembly, as shown in Figure 2, right view. Re-install the Front Molding Assembly to complete the game assembly and setup procedure. Prepare the game for your players: Plug it in, turn it on, and check for proper operation.

GAME OPERATION

WARNING

After assembly and installation at its site location, this game must be plugged into a properly grounded outlet to prevent shock hazard, and to assure proper game operation. DO NOT use a 'cheater' plug to defeat the ground pin on the line cord. DO NOT cut off the ground pin.

POWERING UP. With the coin door closed, plug the game in, and switch it ON, using the On-Off switch. In normal operation, the Player 1 score display initially shows 00. Then, the game goes into the Attract Mode (playfield and backbox lamps flashing, sounds being heard, etc., if the operator does not change the Factory Setting).

Open the coindoor and press the AUTO-UP/MANUAL-DOWN switch to MANUAL-DOWN. Press the ADVANCE button to begin the game test routine. Then, return to AUTO-UP and perform the entire test to verify that the game is operating satisfactorily.

GAME OPERATION (Continued)

NOTE

SYSTEM 11B software for *BANZAI RUN* has a great new capacity to aid operators and service personnel: If the game software detects a fault at game turn-on, the game displays "PRESS ADVANCE FOR REPORT". These words are accompanied by a sound.

During the Attract Mode, the operator can check for faults by *pressing the CREDIT button*, and observing the resulting message. Normally, the game displays "CREDITS 0" after Credit button actuation. When the game detects a fault, the message will change slightly: A decimal point appears follows the zero (CREDITS 0.). To receive a "TEST REPORT" and enter the test/diagnostic system, press the ADVANCE button.

Pressing the ADVANCE button displays the "TEST REPORT" message. This message is followed by a description of detected faults. Then the game enters the requested test or diagnostic mode. If you press ADVANCE during a report, the game skips the remainder of the report. Instead of continuing the report, the game enters the requested diagnostic or test mode.

ATTRACT MODE*. Playfield and backbox lamps blink. All player score displays exhibit a series of messages informing the player concerning:

A. Recent highest scores*;

B. A "custom message"

("BE KING OF THE ... HILL -- RACE... BANZAI RUN");

C. The score to achieve to obtain a Replay award*;

These (or similar) displays reappear occasionally, accompanied by sounds and music, until a player initiates game play by inserting a coin or, when credits are available, pressing the Credit button.

CREDIT POSTING. Insert coin(s). A sound is heard for each coin, and the player score displays show the number of credits purchased. So long as the number of maximum allowable credits* are *NOT* exceeded by coin purchase or high score, credits are posted correctly. However, after this maximum credits value is reached, posting of additional credits won (or purchased) by the player does *not* occur.

STARTING A GAME. Press the Credit button once. A startup sound plays, and the Credit amount shown in the player score display decreases by one. The BALL IN PLAY Lamp lights (to the right of the Player 4 display, which shows 00__1, to identify ball 1 for the flashing Player display). Player display 1 flashes 00, until the first playfield switch is actuated. Additional players may enter the game by pressing the Credit button once for each player, before the end of play on the first ball.

TILT. Actuating the Slam Tilt switch on the coin door inside the cabinet ends the current game; *BANZAI RUN* then proceeds to the Game Over Mode. With the actuation of the playfield tilt switch, or the third closure* of the plumb bob tilt switch, the player loses the remaining play of that ball, but can complete the game.

END OF GAME. All earned scores and bonuses are awarded. If a player's final score exceeds the specified value, the player receives a designated award for achieving the current highest score. A random digit set* appears in the Match display. Credit* may be awarded, when the last two digits of any player's score display (1 through 4) match the random digits of the Match display. Match, high score, and game over sounds are made, as appropriate.

GAME OVER MODE. The GAME OVER display shows in the player score displays. Then, the high scores flash on the appropriate player score displays. The game proceeds to the Attract Mode.

* - operator-adjustable feature

BANZAI RUN GAME STATUS DISPLAYS

BANZAI RUN provides the game owner/operator with a display of information concerning the game's bookkeeping and game play feature adjustments. Basically, three classes of information now become available in this status display mode: Id (Identification); Au (Audit); Ad (Adjustment). Each of the underscored two-letter abbreviations for these classes appears in the Player 3 score display, while the system microprocessor for the *BANZAI RUN* game is displaying the items within each class.

Identification Information--Id

With the game turned on, the coin door open, and the AUTO-UP/MANUAL-DOWN switch in the AUTO-UP position, the operator can press the ADVANCE switch once, briefly. *BANZAI RUN*'s displays immediately change from the Attract Mode to the Game Status Display Mode. This is evident by the following display, shown in columnar form. The column headings refer to the various backbox displays.

Player 1	Player 2	Player 3	Player 4
BANZAI	RUN	Id 00	566 L-x*

* x - indicates ROM revision level; e.g., 1 is initial issue; 2, 3, etc. for later revisions.

The game is named in the Player 1 and 2 score displays. The game's identification number shows in the Player 4 score display with the ROM revision level. The Player 3 score display shows the status display mode in abbreviated form, *Id*, with the identifier (00) for this particular display.

Pressing ADVANCE once more causes the *Id 01* display to appear. This display describes which of the "Install" options is currently in effect. For example, if the YES option of the INSTALL FACTORY Adjustment Item (Ad 70) was last selected, FACTORY SETTING appears on the player score displays. Changing the setting of any other game adjustment item, after selecting the YES option for Ad 70 causes the display to change to FACTORY ALTERED. Similarly, if the operator selects the YES option for INSTALL HARD (Ad 65), the display indicates HARD SETTING. Changing a game adjustment item later then causes the display to show HARD ALTERED.

Audit Information--Au

While the AUTO-UP switch remains in the Up position, the operator can press the ADVANCE switch once, briefly, to begin the backbox displays of Audit (sometimes called "bookkeeping") Information. Forty-five audit entries are now available. Calculation of the various factors is no longer necessary because the System 11B game program now performs all the mathematical factor computations. This information is intended to aid the owner/operator in evaluating how the game is performing in each location, by providing knowledge about which game features are receiving the most play. With this information, the owner/operator can determine whether adjusting the game features to other settings will contribute to increased game earnings. The operator can press the ADVANCE button once to view each Audit Information display item. To proceed more rapidly through this information, the operator can press and hold the ADVANCE button. If a desired item is passed, the operator can use the MANUAL-DOWN switch position with the ADVANCE button to back up to the desired item.

The *BANZAI RUN* Audit Table lists the 45 items of the Audit Information portion of the *BANZAI RUN* Game Status Displays. Presentation of this Audit Information again utilizes the player score displays; however, the Player 1 and 2 displays are combined as a descriptive phrase. The light type below the table's column headings names the respective backbox displays where the information appears. Because the Player 4 display contains information which depends on game play, only a few example entries are shown in the table. The Player 3 display shows *Au* for all 45 audit items, so its entry is omitted from the tabular listing. Detection of erroneous data affecting any of the counters used in these audit items causes the message, ERROR, to be displayed in the Player 3 display, during display of any audit item associated with that particular counter. (The program does not analyze the cause of the error; it merely alerts the operator of the error's existence by the message.)

BANZAI RUN GAME STATUS DISPLAYS (Continued)

BANZAI RUN Audit Table

Audit Item (Player 3)	Descriptive Phrases (Player 1 and 2 Displays)	Audit Factor ¹ Value (Player 4)
AU 01	LEFT COINS [chute next to coin door hinge]	432

44	2.0-2.4 M. SCORE (# of games ≥2.0M, <2.5M)	
45	2.5-9.9 M. SCORE (# of games ≥2.5M or more)	
NOTE: 1. The numbers shown in this column for Items 1 through 4 are examples. Entries for all items depend on the amount of play; thus, they will-vary from location to location.		

Adjustment Information--Ad

At end of the Audit Information presentation, with the AUTO-UP switch in the Up position, the operator can press the ADVANCE button to proceed to the Adjustment Information portion of the *BANZAI RUN* Game Status Displays, as listed in the *BANZAI RUN* Game Adjustment Table.

BANZAI RUN GAME STATUS DISPLAYS (Continued)

BANZAI RUN Game Adjustment Table

Adjustment Item (Player 3)	Descriptive Phrases (Player 1 and 2 Displays)	Factory Setting (Player 4)
Ad 01	AUTO REPLAY ¹ or FIXED REPLAY ¹	10 (%)

68	CLEAR COINS	NO
69 ⁷	CLEAR AUDITS	NO
70	INSTALL FACTORY	NO

NOTES:

1. Automatic Replay percentage value range is adjustable from 5 to 50%, via the Credit button. Item 02 permits changing the factory setting value for Replay Start Level (valid for next 500 games played). Item 03 permits setting up to four replay levels, with values as detailed in text describing item 03. For Fixed Replay Scores, set Auto Replay value to 1 less than 5(%) via the Credit button. Go to items 02, 03, 04, and 05; install their replay level scores. Turn off any replay level by setting 00 as its value.
2. Phrase in parentheses is Factory Setting. Phrase appears in player 2 and 4 displays. Press Credit button to change setting of the game pricing of item 24.
3. To change country OR coinage setting, press Credit button to obtain 16 Standard settings, followed by a Custom Setting. The Custom Setting activates items 25 through 30. When a Standard Setting is used, items 25 through 30 are set automatically, and cannot be changed.
4. To install Custom Message, press flipper button for alphabet and special characters. Press Credit button for next message letter or character.
5. Special Preset Adjustment, whose effects are noted in the Game Adjustment text.
6. Refer to Pricing Table and text describing these items.
7. Approximates Ad 64, yet includes all factors listed in Factory Setting column, not just Ad 31 through 47 provided by Ad 64.

***BANZAI RUN* GAME STATUS DISPLAYS (Continued)**

The operator can press the ADVANCE button once to view each Adjustment Information display item. To proceed more rapidly through this information, the operator only has to press and hold the ADVANCE button. If a desired item is passed, the operator can use the MANUAL-DOWN switch position with the ADVANCE button to back up to the desired item.

The *BANZAI RUN* Game Adjustment Table lists the 70 items of the Adjustment Information portion of the *BANZAI RUN* Game Status Displays. Presentation of the displays is similar to that for the Audit Information (that is, the player 1 and 2 displays combine as a descriptive phrase; the light type below the column headings names the respective backbox displays where the information appears, etc.). The Player 3 display shows *Ad* for all 70 adjustment items, so its entry is omitted from the tabular listing.

GAME ADJUSTMENT PROCEDURE

Adjustment Items 01 through 70

The coin door must be open to access the Game Adjustment/Diagnostic switches. All readings and setting changes require operation of these coin door switches. Some setting changes utilize the Credit button; some also use the flipper button(s). *Additional text describing the game adjustment items follows this procedure; the value of the Factory Setting for each Game Adjustment item is in the preceding *BANZAI RUN* Game Adjustment Table.*

1. Use AUTO-UP and press ADVANCE. The *Id 00* display initially appears. Press ADVANCE until the Player 3 display indicates **Ad 01**. If the factory setting has not changed, the Player 1 and 2 Score displays indicate AUTO REPLAY, and the Player 4 display shows 10%, indicating a 10% replay percentage. (The game program adjusts itself automatically, as discussed in the following text concerning the 'details' about Adjustment Item 01.)
2. To reach a higher item number (in the Player 3 display), use AUTO-UP and press ADVANCE. To return to a previous item number, use MANUAL-DOWN and press ADVANCE.
3. With the desired Game Adjustment Item number showing in the Player 3 display, increase the setting value (or select another option) shown in the Player 4 display by using AUTO-UP and pressing the Credit button. Repeat this step for each item, until all changes to the factory settings for the Game Adjustment Items have been made. The preceding Game Adjustment Table consolidates the Factory Settings into one grouping.

(The same procedure can be used for Audit Items. To zero **Au 01 - 04** (concerning the coin chutes and the total coins), the operator can proceed to item 68, Clear Coins, and press the Credit button to obtain the YES option. The operator then presses the ADVANCE button and notes the "DONE" message, which verifies that the entry values for items 01 through 04 of the Audit Items are now reset to zero.)

For example, the operator may desire to change the degree of game play difficulty from the Factory Setting (equivalent to the Install Medium [*Ad 64*] difficulty, along with a number of other automatically installed settings, as shown in the right column of the Game Adjustment Table) to another difficulty more suitable for the players at a particular game site. Four other 'automatic' play difficulty settings (*Ad 62 - Ad 66*) are available, each of which, if selected, installs all the adjustments listed for that difficulty in the Game Adjustment Setting Comparison Table, which follows the 'details' text.

GAME ADJUSTMENT PROCEDURE (Continued)

4. To proceed rapidly through the entire adjustments series, press *and hold* ADVANCE, until Ad 70 shows in the Player 3 display. From item 70, you can: (A) return to the Game-Over Mode; or (B) restore factory settings and zero audit (bookkeeping) totals. Perform either of the following, as desired:
 - A. To reach Game-Over Mode, use AUTO-UP and press ADVANCE once. *BANZAI RUN* now goes to the Game-Over Mode.
 - B. To restore the Factory Settings for Game Adjustment Items (as listed in the Game Adjustments Table), zero all audit (bookkeeping) totals, *and* return to Game-Over Mode, use AUTO-UP or MANUAL-DOWN to display Ad 70 in the Player 3 display. Press the Credit button to display the YES option in the Player 4 display. Using AUTO-UP, press ADVANCE once. *BANZAI RUN* now zeroes ALL Audit Item totals and changes ALL Game Adjustment Items back to those originally selected as Factory Settings. It then shows the operator a message ("FACTORY SETTING") that this has occurred. (A problem in the Memory Protection circuit or closing the coin door will cause the message "ADJUST FAILURE" to appear.) Press ADVANCE once more to return to the Game-Over Mode.

Details of Adjustment Items 01 through 70

01 Auto Replay (or Fixed Replay)

Of the two options, AUTO REPLAY is the percentage of replays automatically awarded per game. The game program aids a pinball's initial installation by causing a comparison of the value of the Replay Level to the value of all players' scores every 50 games for the first 1,000 games. At each comparison, the program increases (or decreases) the Replay Level by an amount necessary to achieve the replay percentage specified either via the factory setting (or later operator selection). (After the first 1,000 games, the comparison occurs after every 500 games. The adjustment value is 100K, for this (and each subsequent) comparison.) Use the Credit button to change the percentage within the range of 5 to 25 (%), with the value increasing using AUTO-UP (or decreasing using MANUAL-DOWN). The next Credit button change below 5%, selects the FIXED REPLAY option.

For AUTO REPLAY, Ad 02 provides the Starting Replay Level (Player 1 and 2 displays show REPLAY START). Ad 03 provides the number of replay levels (01, 02, 03, or 04). *BANZAI RUN* then proceeds to Ad 06 automatically.

For FIXED REPLAY, Ad 02 is the first replay level (REPLAY LEVEL 1). Ad 03, 04, and 05 are the other replay levels.

02 Starting Replay Level (or Replay Level 1)

For AUTO REPLAY (refer to Ad 01), the initial Factory Setting is listed in the Game Adjustment Table, but this will change when the game compares the players' scores with this adjustment's value during its auto adjustment activity. The range of settings is 1,000,000 to 3,000,000 by increments of 100,000 with AUTO-UP or decrements of 100,000 with MANUAL-DOWN).

For FIXED REPLAY, the operator can enter the value to be used for the first fixed replay score level via the Credit button. The range of settings is: OFF; 100,000 through 9,900,000 (by increments of 100,000 with AUTO-UP, or decrements of 100,000 with MANUAL-DOWN).

GAME ADJUSTMENT PROCEDURE (Continued)

03 Replay Levels (or Replay Level 2)

For AUTO REPLAY (refer to Ad 01), this is the number of replay levels in a game. The option range is *one, two, three, or four* replay level(s). When the operator chooses two replay levels, *BANZAI RUN* automatically adjusts the second replay level to be twice the value selected for Ad 02, the starting replay level. Choosing three or four replay levels automatically adjusts their replay levels to three times or four times the Ad 02 value.

For FIXED REPLAY, the technique of value entry and the range of settings are identical to those of Ad 02.

04 (Replay Level 3)

For AUTO REPLAY, this Adjustment Item is not applicable. *BANZAI RUN* automatically bypasses this adjustment.

For FIXED REPLAY, the technique of value entry and the range of settings are identical to those of Ad 02.

05 (Replay Level 4)

For AUTO REPLAY, this Adjustment Item is not applicable. *BANZAI RUN* automatically bypasses this adjustment.

For FIXED REPLAY, the technique of value entry and the range of settings are identical to those of Ad 02.

06 Replay Award

For either AUTO REPLAY or FIXED REPLAY (Ad 01), the operator can select the form of the award automatically provided when the player exceeds any Replay Level (Automatic or Fixed). The choices are:

- Credit* - Reaching each replay level obtains a credit (free game).
- Ball* - Reaching each replay level obtains an extra ball.
- Audit* - Reaching each replay level obtains nothing to the player; it does increase the entry value of the Audit Item(s) maintaining a tally of these awards (Au 08, and Au 20 through 23, as applicable).

07 Special Award

The operator can select the form of the award automatically provided when the player scores a Special. The choices are:

- Credit* - Scoring each Special, when lit, obtains a credit (free game). A variation to this award occurs, when the setting of Ad 06 is Coil. (This permits a ticket or token dispenser to provide the award, when applicable.)
- Ball* - Scoring each Special, when lit, obtains an extra ball.
- Score* - Scoring each Special, when lit, obtains a score advance of 250,000 points to the player.

GAME ADJUSTMENT PROCEDURE (Continued)

08 Match Award

The operator can select (via the Credit button) the desired percentage for the Match action occurring at the completion of each game. The choices are:

5%-20% - 5% is 'hard'; 20% is 'extremely easy'. During Match action, the game selects a random two-digit number at end of game and compares each player's score for an identical two digits in the rightmost two positions. A matching of the two digits results in the award of a credit (or a ticket/token, if a dispenser is attached, and the setting of Ad 06 is Coil).

Off - The MATCH display does not operate at completion of the game; no award is given.

09 Balls / Game

The operator can define a "game" by specifying the number of balls to be played. The range of this setting is 1 through 9. For example, for 5-ball play, select 5 as the setting, which then automatically installs the preset adjustments noted for 5-ball play (Ad 60).

10 Tilt Warning

The operator can specify the number of total actuations of the plumb bob and playfield tilt mechanisms that can occur before the game is "tilted". The range of this setting is 1 through 5.

11 Maximum Extra Ball

The operator can choose (via the Credit button) the maximum number of Extra Balls to be accumulated at any time during game play. The range of this setting is: 00 (which allows NO extra ball play and displays a message, NO EX. BALL) and 01 -09, the selected number of balls. The Factory Setting is 4.

12 Maximum Credits

The operator can specify the maximum number of credits the game can accumulate, either through game play awards or coin purchases. The range of settings is 5 through 10. Reaching the specified setting prevents the award of additional credits.

13 Highest Scores

The operator can specify (via the Credit button) whether the game is to maintain a record of the four highest scores achieved to date. The choices are:

Off - NO high scores are recorded.

On - The four highest scores are stored in memory for use by Game Adjustment 22.

Auto - The four highest scores are stored in memory for use in a game program subroutine associated with Game Adjustment 22.

14 Backup High Score 1

The operator can set the Backup High Score value in the Player 1 Score display, using the Credit button. The game automatically restores this value, when the operator presses, and holds, the HIGH SCORE RESET switch, or when an automatic High Score Reset event (Ad 22) occurs.

15 Backup High Score 2

This adjustment is similar to Ad 14, except that this applies to the Player 2 Score display. The adjustment technique is identical to Ad 14. It is also restored as described for Ad 14.

16 Backup High Score 3

This adjustment is similar to Ad 14, except that this applies to the Player 3 Score display. The adjustment technique is identical to Ad 14. It is also restored as described for Ad 14.

GAME ADJUSTMENT PROCEDURE (Continued)

17 Backup High Score 4

This adjustment is similar to Ad 14, except that this applies to the Player 4 Score display. The adjustment technique is identical to Ad 14. It is also restored as described for Ad 14.

18 Credits for Highest Score 1

The operator can select the number of credits to be awarded, by using the Credit button, whenever a player exceeds the previous Highest Score. The range of this setting is 00 through 10. A variation to this award occurs, when the setting of Ad 06 is Coil. (This permits a ticket or token dispenser to provide the award, when applicable.)

19 Credits for Highest Score 2

This adjustment is similar to Ad 18, except that this applies to the player's exceeding the second highest score. The Credit button adjustment technique is the same as for Ad 18. The range of this setting is 00 through 03.

20 Credits for Highest Score 3

This adjustment is similar to Ad 18, except that this applies to the player's exceeding the third highest score. The Credit button adjustment technique is the same as for Ad 18. The range of this setting is 00 through 03.

21 Credits for Highest Score 4

This adjustment is similar to Ad 18, except that this applies to the player's exceeding the fourth highest score. The Credit button adjustment technique is the same as for Ad 18. The range of this setting is 00 through 03.

22 Automatic High Score Reset

The operator can specify (via Credit button) that the game will provide an automatic reset of the displayed "Highest Scores", and the number of games to be played before the reset occurs. (Audit item 39 displays the games remaining before the reset.) The values provided upon reset are those selected by the operator in Ad 14 through 17, the Backup High Scores. The range of this setting is Off (to disable this adjustment), and 1,000 to 24,750 games (in increments of 250).

23 Free Play

The operator can select (via the Credit button) whether a player can operate the game without a coin (free play) or with a coin. The choices are:

- No - A coin is necessary for game play.
- Yes - Game play is free; no coin is required.

24 Coinage Selections

The operator can specify (via the Credit button) any of the 16 Standard Settings for game pricing, each of which exhibits a message identifying the country and the number of coins required and the number of games that the coin requirement purchases. Choosing a Standard Setting permits the game to omit items Ad 25 through 30, which are adjustments allowing for a special custom coinage setting.

Following the last Standard Setting is a Custom Coinage Setting, which allows the operator to utilize Ad 25 through 30 in establishing a special coinage setting. - A message, CUSTOM COINAGE, indicates that the operator can enter the appropriate values into the Ad 25 through 30 adjustment items.

The values for Ad 25 through 30 of each Standard Setting, as well as other possible values for the Custom Coinage Setting are shown in the **Pricing Table**.

GAME ADJUSTMENT PROCEDURE (Continued)

25 Left Chute Coin Units

The operator can specify (via the Credit button) the number of coin units purchased by a coin passing through the left coin chute.

26 Center Chute Coin Units

The operator can specify (via the Credit button) the number of coin units purchased by a coin passing through the center coin chute.

27 Right Chute Coin Units

The operator can specify (via the Credit button) the number of coin units purchased by a coin passing through the right coin chute.

28 Units Required for Credit

The operator can define (via the Credit button) the number of coin units required to obtain 1 Credit. A coin unit counter in the game program totals the number of coin units purchased through all coin chutes prior to each game. If the total number of coin units purchased exceeds the 1 Credit factor by a multiple (or more, coin units) of the specified Units per Credit value, the Credits display shows the proper number of Credits. The coin unit counter retains any remaining coin units, until the start of a game; then, the coin unit counter is cleared (its contents are zeroed).

29 Units Required for Bonus

The operator can specify (via the Credit button) that 1 additional Credit is to be indicated in the Credits display, when a certain number of coin units are accumulated.

30 Minimum Units Required for any Credits Posted

The operator can specify that NO Credits are to be posted (indicated in the Credits display), until the credit units counter reaches a particular value.

GAME ADJUSTMENT PROCEDURE (Continued)

31 CHALLENGED AT START

The operator can choose (via the Credit button) the number of riders challenged at the game start. The range of this setting is *00* (Conservative; NO riders challenged at game start); and *01* (1 opponent rider challenged) through *04* (Liberal; 4 opponent riders challenged).

32 KICK BACK

The operator can choose (via the Credit button) the Kickback action to suit the game location. The range of this setting is *Easier* (Liberal; the Kickback is ALWAYS ON); *Easy* (Kickback is ON at start of each ball); *Regular* (Kickback is ON at start of game and remains in memory from ball to ball); *Hard* (Kickback is OFF at start of game and remains in memory from ball to ball); *Harder* (Kickback is OFF at start of every ball). The game program automatically sets *REGULAR* for 1 play @ 1 coin (25¢).

33 EXTRA BALL AT (# of Laps)

The operator can choose (via the Credit button) the number of laps needed to light the Lower Captive Ball lamp for an EXTRA BALL. (Each player begins the game with 1 Lap.)

34 FINISH LINE AT (# of Laps)

The operator can choose (via the Credit button) the number of laps needed for the Finish Line feature. This feature is intended to be a challenge for the very skilled player. The range of this setting is *20* (Liberal) through *39* (Conservative).

35 INSTANT REMATCH

The operator can choose (via the Credit button) the time period for achieving an Instant Rematch. The choices are *Easy* (approximately 28 seconds) and *Hard* (approximately 23 seconds).

36 SPECIAL AT RANK 2

The operator can choose (via the Credit button) the number of Races in which the player must achieve Rank 2 to light the SPECIAL lamps at the Outlanes. The range of this setting is *OFF* (No Special lamps light); *Race 1* (Liberal; Special lamps light the 1st time Rank 2 is achieved) through *Race 4* (Conservative; Special lamps light the 4th time Rank 2 is achieved).

37 SPECIAL MEMORY

The operator can choose (via the Credit button) whether the lighting of the Special lamps is stored in memory. The choices are *No* (The Special achievement is NOT stored in memory from ball to ball) and *Yes* (The Special achievement IS stored in memory from ball to ball).

38 FREE STYLE

The operator can choose (via the Credit button) the manner in which the Freestyle lamps light upon completion of the lower targets. The choices are *Easy* (Liberal; both lamps light, when the lower targets are all completed) and *Hard* (Conservative; one lamp lights each time lower targets are completed).

39 STUNT CHALLENGED

The operator can choose (via the Credit button) the number of riders challenged by the Super Cycle Stunt skill shot. The range of this setting is *00* (Conservative; NO riders challenged by Super Cycle Stunt skill shot; ONLY points are awarded); and *01* (1 opponent rider challenged and points are awarded) through *04* (Liberal; 4 opponent riders challenged and points are awarded).

40 CENTER EJECT LOCK

The operator can choose (via the Credit button) how the Center Eject Hole lamp is lighted, AFTER the player achieves Rank #2. The choices are *Earn* (the player must complete the 12 rider targets on the lower playfield) and *Free* (the Center Eject Hole lights when the the player achieves Rank 2.)

GAME ADJUSTMENT PROCEDURE (Continued)

41 RAMP SPOT

The operator can choose (via the Credit button) whether the Ramp spots a Rider arrow and on which race that the spot occurs. The range of this setting is:

- Off* - The Ramp NEVER spots a rider arrow.
- 1 Race* - The Ramp spots a rider arrow during the 1st Race (until the 1st Multi-Ball).
- 2 Races* - The Ramp spots a rider arrow during the 1st 2 Races (until the 2nd Multi-Ball).
- 3 Races* - The Ramp spots a rider arrow during the 1st 3 Races (until the 3rd Multi-Ball).
- 4 Races* - The Ramp spots a rider arrow during the 1st 4 Races (until the 4th Multi-Ball).
- 5 Races* - The Ramp spots a rider arrow during the 1st 5 Races (until the 5th Multi-Ball).

42 TIME LOCK CHANCES

The operator can choose (via the Credit button) when the ball ejects from the Time Lock. The choices are *1* (the ball ejects from Time Lock after the 1st trip to the upper playfield following Time Lock) and *2* (the ball ejects from Time Lock after the 2nd trip to the upper playfield).

43 LIFTER HOME

The operator can choose (via the Credit button) the 'home' position of the Ball Lifter after its operations are complete. The choices are *Lo* (the Ball Lifter returns to the lower position after the lift) and *Hi* (the Ball Lifter returns to the upper position after the lift).

44 RANK-1 EX. BALL

The operator can choose (via the Credit button) whether the Rank #1 Captive Ball lights to award an Extra Ball (in addition to awarding King of the Hill) to the player who completes the A - B - C Targets. Note: This is only available after a Time Lock in Multi-Ball. The choices are *Yes* (the Extra Ball is awarded) and *No* (No Extra Ball is awarded).

45 POST TIME

The operator can choose (via the Credit button) the amount of time for the upper playfield Flipper Post to be extended, during the 1st Race only. The range of this setting is *Short* (Post stays out approximately 7 seconds, during the 1st Race); *Regular* (Post stays out approximately 12 seconds, during the 1st Race); *Long* (Post stays out approximately 16 seconds, during the 1st Race). Note: AFTER the first Race, the post stays out only 7 seconds.

46 2 Coin Prompt

The operator can choose (via the Credit button) to inform the player that a second coin is necessary, after the first coin is inserted. The choices are *Yes* (when the game is set for 2 coins per credit, a prompt appears requesting the second coin); and *No* (No prompt appears).

47 Dollar Bills

The operator can choose (via the Credit button), on games using a Dollar Bill Acceptor, to inform the player whether a dollar bill is allowed to replace four coins or not. The choices are *No* (" \$1.00 will NOT replace 4 coins" in prompt and pricing messages); and *Yes* (" \$1.00 WILL replace 4 coins" in prompt and pricing messages).

48 Show Half Credit

The operator can choose (via the Credit button) to show, on games set for 2 coins per credit, that one coin gives One-half Credit. The choices are *Yes* (when only one coin is inserted, the game shows 1/2 Credit); and *No* (the game will not show credit fractions).

GAME ADJUSTMENT PROCEDURE (Continued)

49 Custom Message

The operator can choose (via the Credit button) whether to display a message during the Attract Mode. (When display of a message is selected, the operator can either utilize the message provided or change the message.) Three choices are available:

- 1 - Display a message during the Attract Mode. The Player 4 display shows this choice as ON. The 3-line message provided is:
BE KING OF THE ... HILL -- RACE ... BANZAI RUN
- 2 - Do NOT display a message during the Attract Mode. (Player 4 shows OFF.)
- 3 - The Player 4 display shows this choice as CHANGE. The operator can enter a special ("custom") message, as follows:
 - A. Press ADVANCE once. The operator can now enter as many as three 14-character lines for display during the Attract Mode.
 - B. Use the flipper button(s) to select each message character (alphabet, numbers, and special symbols are available). In case of error, enter a "back arrow" (just before "space") to correct, followed by correct character. For a period after any letter, use letters with periods (following the special symbols). The entire character set is the following:
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9 < > ? - / *
A . B . C . D . E . F . G . H . I . J . K . L . M . N . O . P . Q . R . S . T . U . V . W . X . Y . Z . _
 - C. Move to the next character via the Credit button. No entirely blank lines will be displayed.

50 SW. ALARM KNOCKER

The operator can choose (via the Credit button) whether the knocker operates, sounding an alarm to signal a switch problem, at the time of game Turn-On and at the beginning of the Test/Diagnostic Procedures. Two choices are available:

- Yes - The knocker sounds, signalling a switch problem, at game Turn-On and at the beginning of the Test/Diagnostic Procedures.
- No - The knocker does NOT sound. (Player 4 shows NO.)

51 Attract Mode Sounds

The operator can select (via the Credit button) whether sounds occur during the Attract Mode. The choices are:

- Yes - Sounds occur after the player touches the Credit or Flipper buttons.
- No - No sounds occur until coins are inserted.

52 Attract Mode Sounds

The operator can select (via the Credit button) whether music plays periodically during the Attract Mode. The choices are:

- Yes - After a game is played, music occurs during the Attract Mode.
- No - No music during the Attract Mode.

SPECIAL PRESET ADJUSTMENTS CAUTION

Adjustments 53 through 55 aren't used in U. S. games. Adjustments 56 through 66 are Special Preset Adjustments to enable the operator to perform the setting of multiple adjustments at once. They permit the operator to: (1) modify a game for a specific area (special U.S.A. coinage settings, for example, Ad 56 through 58); (2) change a group of adjustments to conform with laws of certain localities (Ad 59 through 61); and (3) to change the degree of difficulty of game play (Ad 62 through 66).

A list of the preceding individual Adjustment Items affected accompanies each Special Preset Adjustment 59 through 61. For Adjustments 62 through 66, a table itemizing the differences between each Difficulty Adjustment follows the text concerning Game Adjustments.

GAME ADJUSTMENT PROCEDURE (Continued)

SPECIAL PRESET ADJUSTMENTS CAUTION (Continued)

Whenever the operator chooses to use any Special Preset Adjustment, the operator can later access any or all of the individual Adjustments affected by that Special Adjustment for subsequent changes.

A similar technique is recommended in the event of error or uncertainty concerning any Special Preset Adjustment, after the operator selects it: The operator can restore the factory setting of each individual Adjustment, then select the desired Special Preset Adjustment, and then return to any of the preceding individual adjustments to determine whether use of the Special Adjustment has had the desired effect.

The Backbox displays for each Special Preset Adjustment indicate whether the operator has selected it, by identifying the Adjustment in the Player 1 and 2 displays by name and the selection choice of NO, meaning Not Selected (this is the Factory Setting), or YES, meaning Selected, in the Player 4 display. Operator installation of the 'selected' Preset Adjustment occurs by using the Credit button to choose YES and then pressing the ADVANCE switch. The displays then show the name of the Adjustment again, with DONE to show that the installation is now in effect.

Note that, when an operator installs any of the Special Preset Adjustments, Adjustment Items using the automatic adjust feature of the game program reset to the auto adjust value listed for that Adjustment Item.

53-55 Not Used

56 Install One Coin

The operator can select the Standard Setting "U.S.A. 3", as shown in the **Pricing Table**, and also select the value of Regular for Adjustment Ad32. The choices are Yes (Select USA 3 [1 play/1 -25¢ coin] and Ad32 = Regular) and No (Factory Setting USA 2).

57 Install 3/\$1

The operator can select Standard Setting "U.S.A. 2", as shown in the **Pricing Table**, rather than one of the other Standard Settings. The choices are Yes (Select USA 2 [1 play/2-25¢ coins or 3 plays/4-25¢ coins] or No [Another Standard Setting must be selected]). This is the Factory Setting.

58 Install 2 Coins

The operator can select Standard Setting "U.S.A. 1", as shown in the **Pricing Table**, rather than another Standard Setting. The choices are Yes (Select USA 1 [1 play/2-25¢ coins or 2 plays/4-25¢ coins] or No [Another Standard Setting must be selected]).

59 Install Add-A-Ball

The operator can utilize this option to delete all Free Play awards and replace them with Extra Ball awards. Individual Adjustments are affected, as follows:

<u>Ad</u>	<u>Name</u>	<u>New Setting</u>	<u>Ad</u>	<u>Name</u>	<u>New Setting</u>
06	Replay Award	Ball	18	Hi Scr 1 Credits	00
07	Special Award	Ball	19	Hi Scr 2 Credits	00
08	Match Feature	Off	20	Hi Scr 3 Credits	00
			21	Hi Scr 4 Credits	00

GAME ADJUSTMENT PROCEDURE (Continued)

60 Install 5 Ball

The operator can change the game to 5-Ball play, including the changing of certain Game Adjustment settings to the recommended 5-Ball play difficulty level. Individual Adjustments are affected, as follows:

<u>Ad</u>	<u>Name</u>	<u>New Setting</u>	<u>Ad</u>	<u>Name</u>	<u>New Setting</u>
02	Replay Start	2,500,000	34	Finish Line at	35 Laps
09	Balls / Game	05	38	Freestyle	Hard
32	Kickback	Hard	41	Ramp ISpot	Off
33	Extra Ball at	12 Laps			

61 Install Novelty

The operator can remove all Free Play and Extra Ball awards. Individual Adjustments are affected, as follows:

<u>Ad</u>	<u>Name</u>	<u>New Setting</u>	<u>Ad</u>	<u>Name</u>	<u>New Setting</u>
01	Fixed Replay	SCORES	07	Special Award	Score
02	Replay Level 1	Off	08	Match Feature	Off
03	Replay Level 2	Off	11	No Extra Ball	00
04	Replay Level 3	Off	18	Hi Scr 1 Credits	00
05	Replay Level 4	Off	19	Hi Scr 2 Credits	00
06	Replay Award	Audit	20	Hi Scr 3 Credits	00
			21	Hi Scr 4 Credits	00

62 Install Extra Easy

The operator can change the game play difficulty adjustments to a combination that is extremely easy (sometimes called "liberal"). The Game Adjustment Setting Comparison Table, which follows these 70 individual Adjustments descriptions, lists the Adjustments and the settings that comprise the 'Extra Easy' group.

63 Install Easy

The operator can change the game play difficulty adjustments to a combination that is slightly easier than the Factory Settings. The Game Adjustment Setting Comparison Table, which follows these 70 individual Adjustments descriptions, lists the Adjustments and the settings that comprise the 'Easy' group.

64 Install Medium

The operator can change the game play difficulty adjustments to a combination that matches the Factory Settings. The Game Adjustment Setting Comparison Table, which follows these 70 individual Adjustments descriptions, lists the Adjustments and the settings that comprise the 'Medium' group.

65 Install Hard

The operator can change the game play difficulty adjustments to a combination that is more difficult than the Factory Settings. The Game Adjustment Setting Comparison Table, which follows these 70 individual Adjustments descriptions, lists the Adjustments and the settings that comprise the 'Hard' group.

66 Install Extra Hard

The operator can change the game play difficulty adjustments to a combination that is much more difficult than the Factory Settings. The Game Adjustment Setting Comparison Table, which follows these 70 individual Adjustments descriptions, lists the Adjustments and the settings that comprise the 'Extra Hard' group.

GAME ADJUSTMENT PROCEDURE (Continued)

BANZAI RUN Game Adjustment Setting Comparison Table

Adj #	Adj Description	Extra Easy	Ad 62	Easy	Ad 63	Medium (Factory)	Ad 64	Hard	Ad 65	Extra Hard	Ad 66

45	Post Time	Long		Long		Regular		Short		Short	

RESETTING THE HIGH SCORES

The challenge of exceeding the High Score (either the factory setting or a higher score by another player) is the goal of many pinball game players. To keep a pinball game challenging requires a method of resetting the High Score value for those occasions when a skilled player registers a truly excellent score. Other players note this score and may decide not to play simply because their skill is not adequate to exceed an extremely high score.

For *BANZAI RUN*, in fact, three methods of resetting the High Score values are available. The simplest method involves allowing Game Adjustment Item Ad 22 to reset the High Score values automatically after the specified number of plays designated by the operator. The second method requires pressing the High Score Reset switch on the inside of the coin door in the Attract Mode. This action simply erases the previous high score values and replaces them with the Backup High Score values. The third method establishes new values replacing the factory setting values or previous operator setting values; it requires performing the following steps:

1. Using AUTO-UP or MANUAL-DOWN, reach item Ad 14 (and items Ad 15, 16, and 17, if desired). The High Score value of the factory setting (or previous operator-adjusted setting) appears in the Player 1 display. If this value is satisfactory, go to step 4 below.
2. If you wish to increase the High Score value from that displayed in the Player 1 display, use AUTO-UP, and press the Credit button, until the desired value shows in the Player 1 display.
3. If you wish to decrease the High Score value, use MANUAL-DOWN, and press the Credit button, until the desired value shows in the Player 1 display.
4. Using AUTO-UP, press and hold down ADVANCE, until the Player 3 display shows **Ad 70**. Press ADVANCE once, to return to Game-Over Mode.
5. Press the High Score Reset switch (on coin door), and listen for the sound signifying that the score reset action is complete. Observe player score displays (Player 1, Player 2, etc.) to verify that the new High Score values are displayed.

GAME PRICING

PRICING MADE EASY. Game Adjustment Item Ad 24 allows the operator an easy method of automatically setting the Pricing Functions, shown in columns 25 through 30 in the *Pricing Table*. Pressing the Credit button allows the operator a choice of one of the 16 "Standard" Settings, with associated Automatic Pricing (Player 1 and 2 displays show the Country identifier, with a number for a country having more than one "Standard" Setting; player 3 and 4 displays show the games per coin(s) information). In the Ad 24 Display column of the *Pricing Table*, each "Standard" Setting is denoted by a Country identifier, as mentioned above; otherwise, when applicable for a country, the word "Custom" denotes that the operator must perform the Custom Pricing process.

CUSTOM PRICING. Adjustment Item 24 must be set to the Custom Coinage Setting (player 1 and 2 displaying CUSTOM COINAGE) to enable the operator to enter the desired values for the Pricing Functions (Items 25 through 30, listed in the *Pricing Table*). Item 25 is the left coin chute multiplier. Item 26 is the center coin chute multiplier. Item 27 is the right coin chute multiplier. Item 28 is the number of coin units equal to one Credit. (A Credit is usually equal to one game.)

The calculation of the ratio of Games : Price uses the ratio equation of $X : VC$, where:

X = Coin Chute Multiplier (Item 25, 26, or 27 in *Pricing Table*);

V = Value of coin;

C = Coin units equivalent to one Credit (Item 28).

For example, for 25¢ chutes at the factory setting, substituting values in the Games : Price ratio calculation gives $1 : 25 \times 1$, or one game for 25¢.

UNITS REQUIRED FOR BONUS CREDIT. Item 29 is the number of coin units that must pass through the coin chute(s) before an additional Credit (game) is posted (displayed). At the factory setting, the number in this item is 00. (This 00 means that NO bonus credit (free game) is awarded, although purchase of more than one game at a time occurs.)

MINIMUM COIN UNITS. Item 30 determines the number of coin units that must pass through the coin chute(s) before play may begin. The factory setting for this item is 00. (This 00 means that the Minimum Coin Units feature (Item 30) is disabled, by the factory setting.)

Notes: 1. Factory Default. 2. Standard Setting - Change by pressing Credit button. 3. Default with jumper W7 cut/removed.
4. Other functions are also affected; see the explanations for Adjustment Items 53 through 58.

TEST/DIAGNOSTIC PROCEDURES

AUTOMATIC TEST REPORT

Before and during operation, the *BANZAI RUN* game software monitors many operational aspects of the game and is able to provide a report of any problems detected, as mentioned in the earlier text on Game Operation. When the software does detect a problem, at game turn-on, a display message, "PRESS ADVANCE FOR REPORT", appears. Open the coin door, and press the ADVANCE button to obtain a display describing the detected problem.

For example, display of the message, "Row 1 WHT-BRN Short", indicates that the software has detected a short circuit affecting an entire row in the switch matrix. (Another row with a short circuit problem will cause the display of a similar message, identifying the row, affected wire color, and symptom.)

The message, "PINBALL MISSING", appears after the game detects only two balls available for play. As a remedy, the operator can press the Credit button, which causes the solenoids to actuate three times. Then, if the ball remains missing, the game automatically shifts to 2-ball game play, and the message is stored for later display (by pressing ADVANCE), while game play can continue. After the third ball returns to the ball trough during game play *OR* at Game Over, the software reverts to 3-ball game play, and automatically clears the stored message.

Another message might be "CHECK MAGNET", which indicates that the ball lifter is operating correctly, but the ball is not being lifted out of the left eject hole. When the ball lifter stalls or does not operate properly, the message "CHECK LIFTER" will appear. (This usually is not the result of a bad lifter switch because these are monitored separately. Either of these messages can be cleared only after successful operation of the particular device during game play.

The message, "CHECK SWITCH", followed by a switch's name and matrix number indicates that this switch has NOT been actuated for many games. Clearing of this message can occur during either of the switch diagnostic tests, or during game play, *EXCEPT* for the Lower Lifter and the Upper Lifter switches. When the report displays, "CHECK SWITCH 51 -- LOWER LIFTER" or "CHECK SWITCH 63 -- UPPER LIFTER", it is necessary for the ball lifter diagnostic test (described later in the Diagnostic Test text), or normal game play, to perform 20 consecutive, correct switch closures to clear this message.

NOTICE

During Attract Mode, you may check for faults by *pressing the CREDIT button*. When you press the CREDIT button, the game displays "CREDITS 0." The zero may be followed by a decimal point (CREDITS 0.). The decimal point indicates that the game program has detected a fault. To receive a "TEST REPORT" and enter the diagnostic testing process, open the coin door and press the ADVANCE button.

When a fault is detected at game turn-on, the game displays "PRESS ADVANCE FOR REPORT". These words are accompanied by a sound.

Pressing the ADVANCE button displays the "TEST REPORT" message. This message is followed by a description of detected faults. Then, the program permits selection of the desired diagnostic test or of the entire series of diagnostic tests. Pressing ADVANCE during a report causes the game program to skip the remainder of the report and begin the diagnostic testing.

TEST/DIAGNOSTIC PROCEDURES (Continued)

DIAGNOSTIC TEST PROCEDURES

WILLIAMS ELECTRONICS GAMES also continues to provide a series of diagnostic tests to aid the operator in determining game condition (that is, whether the game's features and highlights are operating satisfactorily). These tests activate all the electronic and electromechanical game devices, so that operator can readily locate a malfunctioning device or simply verify that all devices are working properly. In the order of testing, tested features include music, displays, sounds, lamps, solenoids, switches, and any special features.

A feature called the Auto Burn-in Mode is also available. This mode enables observation of the game during diagnostic tests, *except Switch Test*. This mode can help locate 'intermittent' problems.

To initiate tests, open the coin door. Then, switch the game on. Inside the coin door, set the AUTO-UP/MANUAL-DOWN switch to MANUAL-DOWN. Now, press the ADVANCE button.

MUSIC TEST.

1. In the Music Test, observe that the player 1 and 2 displays show the message, MUSIC TEST. When this MUSIC TEST message appears, listen for an error code from the music board: One beep indicates that the board is OK. Two beeps: RAM error. Three beeps: U4 error. Four beeps: U19 error. You may repeat the beep test by pressing the DIAGNOSTIC button on the Sound Board.

Switching to AUTO-UP, observe that the message now reads MUSIC OFF, and that the player 3 score display shows 00 00. Press the Credit button to select the desired music selection: 01 - 'Main Theme' through 06 - 'King of the Hill Theme'. Adjust the volume control as desired.

2. Use the AUTO-UP position.

DISPLAY TEST.

1. To initiate the Display Test, press ADVANCE. Observe that player 1 and 2 displays briefly show the words, DISPLAY TEST, and that the player 3 score display shows 01 (Display Test identifier).
2. Use AUTO-UP. Observe that all displays begin a display cycle of all 0s through all 9s, one digit at a time. Verify that the proper comma segments light during display of the odd-numbered digits. Next, a special "all segments" character 'walks' from left to right across each player score display.
3. To halt the display cycle, use MANUAL-DOWN. Then, press ADVANCE to step through the sequential digit display, digit by digit, and the subsequent "all segments" characters display test. Use AUTO-UP to resume cycling, and to proceed to the next test.

SOUND TEST.

1. (From Display Test) To initiate the Sound Test, press ADVANCE. Observe that the player 1 and 2 displays show the message, SOUND TEST, and that the player 3 display shows 02 (the Sound Test identifier). The player 3 display shows a series of test steps from 00 through 07. Verify that a different sound is heard each time the number in the display changes.
2. To repeatedly pulse a single sound, use MANUAL-DOWN. Verify that one particular sound repeats. Press ADVANCE to step to the next sound, which repeats until ADVANCE is pressed again. Use AUTO-UP to resume cycling the sounds, and to proceed to the next test.

TEST/DIAGNOSTIC PROCEDURES (Continued)

LAMP TESTS.

1. All Lamps.

(From Sound Test) To initiate the first Lamps Test, press ADVANCE. Observe that the Player 1 and 2 displays show the message, ALL LAMPS, and that the Player 3 display shows 03 (All LampsTest identifier). Note that the Player 4 display shows COL 3 LO and all feature lamps on the lower playfield blink on and off, along with all upper playfield feature lamps, except 65 - 72, which share the Column 3 driver with the lower playfield. (Note, however, that the General Illumination lamps remain lighted steadily.)

Press the Credit button and note that the Player 4 display now shows COL 3 HI and that all feature lamps on the upper playfield blink on and off, along with all lower playfield feature lamps, except 17 - 24, which share the Column 3 driver with the upper playfield.

To locate the wiring associated with a particular feature lamp, refer to the **Lamp-Matrix Tables**. CPU Board connections at jacks 1J6 (columns) and 1J7 (rows) are also listed in the tables.

Each *BANZAI RUN* playfield has its own **Lamp-Matrix Table**. In the lower playfield table, a • shows that the lamp is a #44 bulb; all others are #555. All lamps on the upper playfield are #44.

2. Single Lamps.

From the All Lamps test, using AUTO-UP, press ADVANCE to initiate the Single Lamps Test. The Player 1 and 2 displays initially show the message, SINGLE LAMPS, and the Player 3 display shows 04. Then, the Player 3 display shows 04 01, and the Player 1 and 2 displays change to show ARROW, the name of the lamp currently blinking. Press the Credit button to proceed through an ascending series of designator numbers (01 through 72), with the Player 1 and 2 displays showing the individual lamp's name. Press and hold the Credit button to proceed rapidly to the desired lamp.

SOLENOID TEST.

1. (From Lamp Test) Using AUTO-UP, press ADVANCE. Observe that the Player 1 and 2 displays show the message, COIL TEST, the Player 3 display shows 05 (Solenoid Test identifier). Next, the Player 3 display shows a series of test steps from 01 through 22, while the Player 1 and 2 displays show the solenoid/circuit name. During each of these steps, pulsing of the respective solenoid/circuit occurs. The test cycles repeatedly, unless halted via the MANUAL-DOWN switch. Refer to the **Solenoid Table** for solenoid numbers and wiring information. CPU Board connections at 1P11, 1P12, and 1P19 are also listed in the table.

To continuously pulse a single solenoid/circuit, use MANUAL-DOWN. Press ADVANCE to sequence through the switched, controlled, and special solenoids. Use AUTO-UP to resume test cycling, and to proceed to the next test.

"On" State Logic - Special Solenoid

"Off" State - Special Solenoid:

The Special Switch Trigger Input goes low. Meanwhile, the PIA line remains high. The remaining signals reverse their states.

"On" State Logic - Controlled Solenoid

"Off" State - Controlled Solenoid:

The Enable Input (from the PIA) goes low. Meanwhile, the BLANKING signal remains high. The rest of the signals reverse their states.

TEST/DIAGNOSTIC PROCEDURES (Continued)

NOTE

As directed by the game program, the Solenoid A/C Select Relay (solenoid 12) switches the solenoid B+ power between two power busses to permit actuating two groups of solenoids at the proper times. In its de-energized state, the Relay connects the 'circuit A power' to 16 "controlled" and "switched" solenoids (identified in the table with no suffix letter or the letter A, after the solenoid number). Individual solenoid operation then depends on the game program enabling the ground path for solenoid actuation via the driver transistor associated with each solenoid circuit. For example, the game program can actuate the Outhole Kicker solenoid (sol. 01A), via the driver transistor Q33.

When the game program determines that the Solenoid A/C Select Relay (sol. 12) must be energized, the relay connects 'circuit C power' to eight group C solenoids (01C through 08C). Now, driver transistor Q33 can actuate the Left Spinner Flasher circuit (sol. 01C). Using this "multiplexing" technique, the same driver transistor can control actuation of two separate solenoid circuits.

Notes: 1. Wire colors, except flipper Orn-Vio and Orn-Gry, are ground connections (to coil terminal with unbanded end of diode). Flipper Orn-Vio and Orn-Gry wires connect from CPU Board to flipper switch. 2. Flipper connections shown in braces are from flipper switch to flipper coil. 3. "A" circuits are pulsed, when Sol. 12 is de-energized; "C" circuits are pulsed, with Sol. 12 energized. Wire colors in brackets are those from respective A and C terminals corresponding to the J1-terminal connection listed for the Aux Power Driver Bd, which controls the device pulsing by Sol. 12. 4. Relay is mounted on Backbox Interconnect Bd, p/n D-12112. 5. Relay is mounted on Aux Power Driver Bd, D-12247 in the backbox. 6. Relay is mounted on Relay Bd, C-11902-1.

TEST/DIAGNOSTIC PROCEDURES (Continued)

SWITCH TESTS.

1. Switch Levels.

(From Solenoid Test) To initiate the Switch Levels Test, press ADVANCE. Observe that the Player 1 and 2 displays show the message, SWITCH LEVELS, and the Player 3 display shows 06 (Switch Levels Test identifier). Normally, the right portion of the Player 3 display remains blank, indicating that no switch is actuated.

If, however, a switch is actuated (possibly stuck closed), the Player 3 display shows that switch's number, while the Player 1 and 2 displays indicate the switch's name. A sound also accompanies the displays. (This is another facet of the *BANZAI RUN* System-11B's switch testing capability.) If more than one switch is closed, a series of displays show each actuated switch's name and number.

(In addition, either of these problems could result in the reporting of a switch problem (or problems) at game Turn-On or at the beginning of Diagnostic Tests.)

As soon as the operator opens a closed switch, its name and number are eliminated from the Switch Levels display series. For *BANZAI RUN*, switch numbers can range from 01 through 64. Refer to the *BANZAI RUN Switch-Matrix Tables* (one table for each playfield) for switch numbers and wiring information. CPU Board connections at jacks 1J8 (columns) and 1J10 (rows) are also listed in the table.

Row Problems. If a display of two (or more) switch numbers of a row occurs, although only one switch is closed, check for a short circuit between the column wires.

Multiple Switch Number Indications. Check the associated column wire for a short circuit to ground.

Column Problems. If display of two (or more) switch numbers in a column occurs (while only one switch is actuated), check for a short circuit between the row wires.

Use AUTO-UP to proceed to the next test.

SWITCH TESTS (Continued).

2. Switch Edges.

From the Switch Levels Test, press ADVANCE. Observe that the Player 1 and 2 displays show the message, SWITCH EDGES; the Player 3 display shows 07 (Switch Edges Test identifier). The right portion of the Player 3 display is blank, indicating that no switch is actuated.

This test permits the operator to test whether actuating a switch provides the proper signal to the System-11B switch testing program. When actuating a switch, the operator should see the switch's name and number (in the Player 1, 2, and 3 displays, respectively). If no indication appears at the time the switch is actuated, the operator then knows that there is a malfunction associated with that switch.

Using this technique, the operator can test each switch appearing in the *BANZAI RUN* switch problem reporting displays (either at game Turn-On or at the beginning of the Diagnostic Tests) to determine whether the switch can be actuated. If the switch's name and number are displayed while the operator checks its operation, the operator then knows that the reported problem with that switch is NOT currently caused by a switch malfunction. The operator can then seek other causes for the reported problem, being almost certain now that the switch did not fail. *This test is also useful when the operator is adjusting the sensitivity of a particular switch's actuation mechanism.*

Among the possibilities is the fact that the players have not actuated that switch because of some other problem; the operator should try to analyze what could cause the switch to be missed, and remedy that problem cause. With these new tests, switch problems are, therefore, more easily isolated.

3. *Playfield or CPU Board?* To determine whether a switch problem is in the playfield or the CPU Board, remove connectors 1P8 and 1P10 from the CPU Board. Begin the Switch Test. Use a jumper wire to simulate switch actuation. For example, placing a jumper between 1J10-9 and 1J8-2 should (based on the **Switch-Matrix Table**) should produce an indication of switch 09 being actuated.

TEST/DIAGNOSTIC PROCEDURES (Continued)

BALL LIFTER TEST.

From the Switch Edges Test, press ADVANCE. Observe that the Player 1 and 2 displays show the message, LIFTER TEST, and that the Player 3 displays shows 08 (Ball Lifter Test identifier). Next, the Player 1 and 2 displays change to the message, LIFTER OFF.

The test checks the operation of the ball lifter mechanism and the associated actuation of the upper and lower ball lifter switches. During the test, the displays provide information concerning the test status (Off or On), the operation of the switches, detected errors, and the number of switch operations without an error.

Pressing the Credit button starts the Ball Lifter test, as indicated by the Player 1 and 2 displays showing the message, LIFTER ON. (Subsequent operations of the Credit button stop or start the ball lifter test, and cause the message to alternate between LIFTER OFF and LIFTER ON.)

Information about the ball lifter test operation is shown in the Player 2, 3, and 4 displays; for example:

Player 1 and 2:	[LIFTER] [ON X4]
Player 3 and 4	[08 UL] [1,000]

The number in the rightmost (7th character) position of the Player 2 display identifies the portion of the test being performed, as designated in the following chart. The Player 2 display 7th digit can also be blank, which indicates that the ball lifter has not yet completed a correct switch sequence.

7th Digit of Plyr 2	Last Switch Made	Switch Expected Next
1	Lower switch going down	Lower switch going up
2	Lower switch going up	Upper switch going up
3	Upper switch going up	Upper switch going down
4	Upper switch going down	Lower switch going down

Whenever the "Switch Expected Next" is *not* actuated, the program detects this as an error and causes a "buzzer" sound. The program then displays the physical state of the lifter at the time of the error in the sixth position of the Player 2 display (shown as "X" in the example display). The "X" is a number (defined in the following chart) that represents the physical state of the lifter when the wrong switch closed.

6th Digit of Plyr 2	Expected Switch	Detected Switch
1	Lower switch	Upper switch
2	Upper switch	Lower switch
3	Upper switch	Lower switch
4	Lower switch	Upper switch

Switch errors may be reported because the "Expected Switch" is intermittent. They may also be reported because the "Detected Switch" is actuating erroneously.

To the right of the test number (08) in the Player 3 display, the letters "U" (upper) and "L" (lower) will appear. Each letter should appear *momentarily*, when the lifter actuates the associated switch. If either the "U" or "L" remains on constantly, then the associated switch is stuck closed and must be repaired to operate properly. As each switch actuates, a unique sound should be heard.

The Player 4 display shows the number of successive switches closed without error. Along with the buzzer, this Player 4 counter is reset when an error occurs.

TEST/DIAGNOSTIC PROCEDURES (Continued)

BALL LIFTER TEST (Continued)

CLEARING LIFTER SWITCH REPORTS. As a result of game operation, the malfunction of either the lower or upper switch associated with the ball lifter will cause 'Test Report' statements, such as the following:

CHECK SWITCH 51 -- Lower Lifter
CHECK SWITCH 63 -- Upper Lifter

Manually operating the switch won't clear the report. To clear either of these reports, the Ball Lifter Test must correctly close the reported switch 20 times (the Player 4 display reads 20, or more). An alternate method of clearing the report is 20 correct closures in game play.

ENDING THE DIAGNOSTIC TESTS.

To end the Diagnostic Tests, reach the Lifter Test (08 in the Player 3 display), use AUTO-UP and press ADVANCE. The backbox displays should show the *BANZAI RUN* game's Identification Information. Use MANUAL-DOWN, and press ADVANCE to reach Adjustment Item 70 (INSTALL FACTORY). Use AUTO-UP and press ADVANCE to obtain the Attract Mode.

AUTO BURN-IN MODE.

The Auto Burn-in Mode permits the operator to check intermittent (or nonrecurring) problems associated with most portions of the game's circuitry. Repeatedly cycling through a group of tests can sometimes bring a problem, which occurs only randomly or occasionally, to exhibit itself more frequently, thereby aiding in the isolation of the problem. To activate the Auto Burn-in Mode:

1. While in the Game Adjustments, reach Ad 67 and change the Factory Setting of NO to YES, via the Credit button. Set the AUTO-UP/MANUAL-DOWN switch to AUTO-UP.
2. Press ADVANCE to start the Auto Burn-in Mode. This mode repeatedly sequences through the Music Test, the Display Test, the Sound Test, the All Lamps portion of the Lamp Test, and the Solenoid Test.
3. To halt the Auto Burn-in Mode, switch the game Off and then On. *BANZAI RUN* now starts in the Attract Mode. (If a switch problem is now reported by the displays, perform the Switch Tests again to determine the nature of the problem; then, perform necessary repairs.)

SYSTEM-11B MEMORY CHIP TEST.

A new feature is now included in the Memory Chip Test for System 11B. During power-up, the CPU performs a self-testing routine. When all tests are satisfactory, the game proceeds to the Attract Mode, allowing players to use the game. Whenever a portion of the testing does not produce satisfactory results, the game displays a message, before proceeding to the next portion of the testing. ONLY after all tests are satisfactory does the game allow play.

In addition to the displayed message, when a test fails, the center LED (marked DIAGNOSTICS) mounted on the CPU Board can be observed to determine the probable cause of the problem. The LED blinks, or flashes, a certain number of times to identify the probable cause, as described in the **CPU LED Indicator Codes Table**. The operator can also start the self-testing routine by pressing the CPU Diagnostic Switch (SW 2) on the edge of the CPU Board.

TEST/DIAGNOSTIC PROCEDURES (Continued)

SYSTEM-11B MEMORY CHIP TEST (Continued)

CPU LED Indicator Codes Table

Diagnostic LED		
Blinks/ Flashes	Display Message	Explanation
1	U25 RAM FAILURE	U25 RAM could not be used properly (NO other tests are performed; the game is locked here, until the game is turned off).
2	MEM. PROT. FAILURE	This message means that (A) the Coin Door may be shut; (B) the Memory Protect Switch may be stuck in the ON position; (C) the memory protect logic is protecting the memory; or (D) a U25 RAM failure is occurring. (See Note 1)
3	U51 PIA FAILURE	U51 has a malfunction. (See Note 2)
4	U38 PIA FAILURE	U38 has a malfunction. (See Note 2)
5	U41 PIA FAILURE	U41 has a malfunction. (See Note 2)
6	U42 PIA FAILURE	U42 has a malfunction. (See Note 2)
7	U54 PIA FAILURE	U54 has a malfunction. (See Note 2)
8	U10 PIA FAILURE	U10 has a malfunction. (See Note 2)
9	IRQ FAILURE	IRQ has a malfunction. It may be missing or too fast or too slow.
10	U27 ROM FAILURE	U27's internal checksums do not match. It may be a ROM failure, or its associated connections and connecting devices are causing it to appear to have a problem. (The following U26 test is skipped.)
11	U26 ROM FAILURE	U26's internal checksums do not match.
Notes: 1. This test assumes that the Coin Door is OPEN; it is initiated ONLY by pressing the CPU Diagnostic Switch (SW2). 2. Alternatively, its associated connections or connecting devices are causing the IC to appear to have problems.		

SYSTEM-11B SOUND CIRCUITRY TESTS.

Tests of the System-11B Sound circuitry, including the Audio Board are possible, only after successful completion of the System-11B Memory Chip Test.

- 1. Sound/Speech Board Test.** A brief check of the Audio Board (D-11581) circuitry occurs at game Turn-on; the game reports the test results by brief sounds, as follows: No sound = Sound/ Speech Board is not operating, or a failure is affecting the sound circuitry (broken cable; dead amplifier; etc.); 1 sound = system OK; 2 sounds = RAM problem; 3 sounds = U4 problem; 4 sounds = U19 problem; 5 sounds = U20 problem.
- 2. General System-11B Sound Test.** Press the Sound Diagnostic Switch (SW 1) on left edge of the CPU Board. Listen for the two test sounds, showing that both the CVSD (Continuously Variable Slope Delta) Modulator, which provides the voices for *BANZAI RUN*, and the DAC (Digital-to-Analog Converter) sound circuits are functioning properly.

If no sound is heard, refer to the text entitled "NO SOUND ...". If one "ring" is heard, this indicates a malfunction of the U23 RAM Chip. If either two or four "rings" is heard, this indicates a problem associated with the U21 ROM Chip. If either three or five "rings" is heard, this indicates a problem with the U22 ROM Chip.

NO SOUND DURING THIS TEST (but sound can be heard during the Diagnostic Tests).

Check the sound-select inputs (pins 2 through 9 of U9) to see if they pulse during Sound Test 01. Also, check the -12 V supply voltage on the CPU Board. If this voltage is low (or AC ripple seems too high), perform the following checks:

1. The gray and gray-green transformer secondary wires for 19.4 VAC.
2. The CPU Board filter capacitor C26 for -12 VDC.
3. The filter capacitor C26 for excessive AC ripple (over 0.75VAC).

TEST/DIAGNOSTIC PROCEDURES (Continued)

SYSTEM-11B SOUND CIRCUITRY TESTS (Continued)

If the previous checks did not isolate the problem, turn the Volume Control for maximum output. Momentarily touch a powered-up AC soldering pencil on the center tap of the Volume Control.

CAUTION

DO NOT use a soldering iron over 40 watts. Note also that cordless soldering irons will NOT work for this test.

Hearing a low hum or a 'click' indicates that the power amplifier (U1, TDA2002), the Volume Control, and the speaker are operating satisfactorily, as is the sound circuit cabling. Not hearing a sound requires repeating the test with the Volume Control turned part way down, to determine whether the Volume Control is faulty. Also, check the cable connectors for proper mating, and that no broken wires affect this circuit.

FUSE LISTING.

| 17 - 5A. | 5.9 Vac Input (F3: Lwr Playfield/ Gnl Illumination) |
| 18 - 5A. | 5.9 Vac Input (F4: UpR Playfield/ Gnl Illumination) |

NOTE: All listed fuses are 250V, Slow-blow, EXCEPT #14, which is a 32V, Slow-blow.

One 8A., 125V, Slow-blow fuse is installed in the Cabinet Line Filter Assembly, except for those foreign games that require a 4A., 250V, Slow-blow fuse.

Figure 3. Fuse Locations & Listing, *BANZAI RUN*

MAINTENANCE INFORMATION

Figure 4 shows the two main lubrication points of the Ball Shooter Lane Feeder. The shaded arrows show the directions in which the Ball Shooter Lane Feeder and other parts of its related assemblies can be adjusted for proper operation. The Freestyle Kickbig on the upper playfield, as well as the Ball Cannon Kickbig, the Lower Left and Right Kickers, and the Eject Hole Assembly (same for both the Left and the Center Eject Holes) all utilize similar mechanisms. To provide your players with the best game action, it is recommended that these devices be checked for operation regularly and lubricated whenever a sluggish action is noted.

Figure 4. Adjustments and Lubrication Points, Ball Shooter Lane Feeder.

Lubrication to ensure proper operation also applies to other devices on *BANZAI RUN*, such as the shaft of the Ball Popper and the Pop-up Flipper Post on the upper playfield. Regular maintenance is essential to a game's continuing contribution to the operator's earnings.

NOTES:

- For Schematic, refer to drawing #16-9019.
- Items 56 and 58 (resistors) must be mounted 1/8" above PCB surface.
- Standard Jumper: W1, W2, W4, W5, W7, W8, W11, W14, W16, W17, W19.

5010-09181-00	R44, R48	Resistor, 1.0 Ω , 1/2w, 5%			
5010-09161-00	R35, R45	Resistor, 2.2 Ω , 1/4w, 5%			
5010-09361-00	R43, R46, R47	Resistor, 220 Ω , 1/2w, 5%			
5010-09358-00	R41, R42	Resistor, 1K, 1/4w, 5%			
5010-08998-00	R2, R3, R12	Resistor, 2.2K, 1/4w, 5%			
5010-08983-00	R7 - R9	Resistor, 3.3K, 1/4w, 5%			

Notes: * 17 capacitors (shown on diagram with "B" symbol) provide +5VDC filtering for ICs.

All capacitors are ceramic, 50v, axial, unless otherwise noted.

All resistors are 5%, 1/4w, Carbon Film, unless otherwise noted.

Flipper Assembly p/n C-11626-R-3

Item	Part No.	Description
1	HW-30018-6	Wire, 18 AWG, Blue
2	03-7520-2	Ty-Wrap, Nylon
3	20-6516	Speednut, Tinnerman
4	5045-12098-00	Capacitor, 2.2 μ Fd, 250V, 20%
5	RM-21-06	Sleeve, Vinyl (Cap. leads)
6	4010-01066-06	Cap Screw, 10-32 x 3/8, SH
7	4701-00004-00	Lockwasher, #10 split
8	A-12111	Flipper Stop Assembly
9	FL-11630/50V*	Flipper Coil (* - Refer to Note 3)
10	4006-01017-04	Mach. Screw, 6-32 x 1/4, P-RH-S
11	01-7695	Solenoid Bracket
12	10-404	Coil Plunger Spring
13	B-10655-R	Crank Link Assembly
a)	02-4179	Link Spacer Bushing
b)	4010-01086-14	Cap Screw, 10-32 x 7/8, SH
c)	4700-00023-00	Washer, 5/8 o.d. x 13/64 i. d. x 16 ga.
d)	4701-00004-00	Lockwasher, #10 split
e)	4410-01132-00	Nut, 10-32 ESNA
f)	A-10656**	Flipper Link Assembly
1.)	02-4219	Coil Plunger
2.)	20-9370-1	Spring Pin, 5/32 dia. x 7/16
3.)	03-8050-1	Flipper Link
g)	B-10657-R	Flipper Crank Assembly, Right
1.)	01-8073-R	Flipper Crank, Right
2.)	17-1037	Crank Washer
3.)	4010-01066-18	Cap Screw, 10-32 x 1-1/8, HCS
4.)	4410-01127-00	Nut, 10-32 Hex Hd.
5.)	4700-00107-00	Washer, 5/8 o.d. x 13/64 i. d. x 12 ga.
6.)	4701-00004-00	Lockwasher, #10 split
7.)	RM-23-06	Tubing, H. S. 1/4 DWP
14	23-6577	Bumper Plug
15	03-7568	Flipper Bushing
16	4006-01005-06	Mach. Screw, 6-32 x 3/8, P-PH
17	4406-01117-00	Nut, 6-32 Hex
18	C-11627-R	Flipper Base Assembly, R.
19	06-14G	Insulating Blade
20	Not Used	
21	Not Used	
22	Not Used	
23	4105-01019-10	Sh. Metal Screw, #5 x 5/8, P-PH-A
24	4701-00002-00	Lockwasher, #6 split
25	23-6622	Tape, Double-sided
26	03-7811	End of Stroke (EOS) Switch

** - also see separate diagram

Flipper Assembly Notes

- Each Flipper Assembly on the Lower Playfield (and the two Lower Flipper Assemblies on the Upper Playfield) is mounted beneath the playfield, in conjunction with the plastic Flipper Paddle and Shaft (20-9250-6) and flipper Rubber (23-6519-4) on the upper side of the playfield. The Upper Flipper Assembly on the Upper Playfield uses a plastic Flipper Paddle and Shaft (20-9264-6) and flipper Rubber (23-6553-4).
- The tip of the EOS Switch must travel 0.0150 (+ .010, - .000) inch, before the contacts fully open, with the flipper in the actuated position. The EOS Switch contacts must have a gap of 0.062 ($\pm$.015) inch. Adjustment of the EOS Switch must be made at a minimum distance of 0.25 inch from the switch body.
- Flipper Assembly C-11626-R-8 (upper flipper on Lower Playfield) uses a Flipper Coil, FL-11753/50V.
- All moving elements of the assembly must operate freely, with no evidence of binding.
- The large end of the Coil Plunger Spring (item 12) must fit within the four lugs of the Solenoid Bracket.
- For coil replacement, remove the Solenoid Bracket (item 11) to prevent screw damage.
- Use Loctite™ 242 when reattaching screws to the Flipper Stop Assembly, the Solenoid Bracket, and the Flipper Bushing.
- When replacing the Bumper Plug (item 14) to restore proper flipper operation, readjust the flipper paddle and shaft position.
- Solid color blue wire connects to the banded end of each diode, mounted on the connector end of the Flipper Coil (item 9). Trace color wire connects to the unbanded end of the diode.

Flipper Assembly

WARNINGS & NOTICES

WARNING

FOR SAFETY AND RELIABILITY, *WILLIAMS ELECTRONICS GAMES* does not recommend or authorize any substitute parts or modifications of *WILLIAMS*' equipment. Use of Non-*WILLIAMS*' parts, or modifications of game circuitry, may adversely affect game play, or may cause injuries.

SUBSTITUTE PART OR EQUIPMENT MODIFICATIONS may void FCC Type Acceptance.

BECAUSE THIS GAME IS PROTECTED by Federal copyright, trademark, and patent laws, unauthorized game conversions may be illegal under Federal law.

THIS 'CONVERSION' PRINCIPLE ALSO APPLIES to unauthorized facsimiles of *WILLIAMS*' equipment, logos, designs, publications, assemblies, and games (or game features not deemed to be in the public domain), whether manufactured with *WILLIAMS*' components or not.

WARNING

This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

WARNING

FCC STICKER. Check the back of your *BANZAI RUN* game to verify that an FCC-certification sticker was attached to your game at the factory.

All games that leave *WILLIAMS*' plants have been tested and found to comply with FCC Rules. Because the sticker is proof of this fact, legal repercussions to the owner and distributor of the game may result, if the sticker is missing. If you receive any *WILLIAMS* game, manufactured after December 1982, that has no FCC sticker, call *WILLIAMS*' for advice or write us a note on your Game Registration Card. Be sure that the card bears your game's serial number.

RF Interference Notice

CABLE HARNESS PLACEMENTS and ground strap routing on this game have been designed to keep RF radiation and conduction within levels accepted by the FCC Rules.

TO MAINTAIN THESE LEVELS, reposition harnesses and reconnect ground straps to their original placements, if they become disconnected during maintenance.
