GAME SPECIFICATIONS

POWER REQUIREMENTS

This game is provided with a 3-prong plug and **must be connected to a properly grounded outlet to reduce shock hazard** and insure proper game operation. Refer to AC Power Wiring Diagram for transformer connections required for normal, high, and low line conditions.

Normal Line: 109 to 129 Vac (211 to 225 Vac)

High Line: (226 to 235 Vac)

Low Line: 95 to 108 Vac (200 to 210 Vac)

MAJOR ASSEMBLY AND FUSE LOCATIONS

Refer to the Game Illustration to identify locations of the major assemblies, and fuse values and locations.

PROM SUMMARY

CPU board: Location 5B, 5C

Sound Board: Locations 6F (Voice ROM 1), 4F (Voice ROM 2), and 7F (Sound ROM)

TRANSPORTATION

To reduce the possibility of damage, observe the following precautions whenever transporting the game. Lower the backbox and secure it to the cabinet. Remove the legs and secure the game within the transporting vehicle.

GAME ASSEMBLY PROCEDURES

(Refer to the Game Illustration)

1. Open the top of the carton and lay it on its side with the bottom of the cabinet down.
2. Remove all packing material. Locate cabinet legs in corner packing inserts and assembly parts package in the cashbox. There should be four leg levelers, eight leg bolts, two head bolts with washers, and three pinballs.
3. Attach leg leveler from the parts package to each leg, make sure that each leveler is threaded through a hex nut before threading it into the leg.
4. Support rear of cabinet and attach rear legs using two leg bolts for each leg.
5. Support front of cabinet and attach front legs using two leg bolts for each leg.
6. Reach into the pedestal opening at the rear of the cabinet and free the power cord. Pull the cord from the cabinet and seat it in the slot provided in the pedestal.
7. While assuring that no cables are being pinched, carefully raise the backbox and temporarily secure it in its upright position with the clamp provided on the rear of the cabinet.

WARNING!!!!

Do not attempt to move the game with the backbox secured in this temporary manner. If moved, the backbox could come unclamped and suddenly fall to the lowered positions resulting in possible **injury to personnel and equipment damage**.

GAME ILLUSTRATION

8. Remove backbox keys from the clip on the inside of the coin door and unlock and carefully remove the backglass. Set the backglass aside.
9. Carefully remove the playfield glass and set it aside.
10. Obtain the two bolts and washers from the parts package and open the backbox insert board. Secure the backbox to the cabinet pedestal with the two bolts and washers.
11. Check all connectors in the backbox for loose wire terminations. Reseat any loose wires by pushing in on the terminal.
12. Push on all connectors plugged into the CPU board, Sound Board, Power Supply Boards, and (on insert board) Display board to check that they are properly seated.
13. Check that the fuses on the Power Supply board and fuse panel are seated properly.
14. Raise the playfield and the support bar on the right side of the cabinet; support the playfield by inserting the support bar into the countersunk notch on the bottom side.
15. Check all cabinet cable connector terminations.

16. Remove the Plumb tilt from the parts package and install on the panel on the inside left of the cabinet. Note that this game is not equipped with a ball roll tilt.
17. Lower the playfield and level the playfield side-to-side by adjusting leg levelers.
18. Adjust playfield front-to-back incline for approximately 6 to 7-1/2 degrees using leg levelers. If an incidence meter is not available, adjust the front levelers to the lowest position and the rear levelers for approximately two inches lift. Readjust side-to-side level as required.

NOTE

The playfield incline affects difficulty of play. Use the recommended incline; game difficulty is best varied using game adjustments.

19. Check the plumb tilt and adjust as required.
20. If desired, perform any self tests at this time. With the insert door closed, carefully re-install and lock the backglass.
21. Place the three pinballs on the playfield near the outhole and carefully reinstall the playfield glass.
22. If desired, make game pricing and Add-A-Bal, Novelty, or 5-Ball Play adjustments at this time.

GAME OPERATION

STANDARD FEATURES

Insert coin(s), the game says Secret Service in digital stereo for each coin and the Player 4 display indicates the number of credits posted. Depress the credit button and a start-up sound is produced, the posted credits are reduced by one, Player 1 display flashes, Player 4 display indicates BALL 1, and a ball is served to the plunger trough. Additional players may be added by depressing the Credit button before the end of ball 1.

The third closure (adjustable) of the plumb bob tilt switch tilts the ball in play. Closure of the slam tilt switch in the coin door ends the current game(s).

At the end of each ball, earned bonuses are collected. At the end of the last ball for the last player and after bonuses are collected, the system produces a random 2-digit number (a multiple of 10; 00 to 90) for a Match feature (adjustable). Matching the last two digits of a player score with this number awards a credit. Players exceeding High Score levels receive free credits (adjustable) and are able to enter their initials with the new High Score achieved. The game then proceeds into the game-over mode and then to the attract mode. A custom message (adjustable) is displayed during the attract mode.

AUTOMATIC BALL TIME AVERAGING

Secret Service introduces a new ball time averager feature which can make automatic adjustments affecting player appeal. This feature is provided by Ad 54 and Ad 55; Ad 54 enables the feature as the factory setting and Ad 55 sets the average ball time. Periodically a check is made of the average ball time and adjustments are made to maintain approximately 70-second (adjustable) ball time. This check is made at the same time that highest scores are reset (Ad 18) so make sure that Ad 18 is not set to OFF. (Note that the other highest score adjustments may be disabled if desired.) Refer to Game Adjustments for additional details.

PLAYFIELD POST SETTING

The average ball time can also be controlled by adjustment of the playfield post positioned at the right drain lane and the ball entry gate. To increase average ball time, move the post to the left closing off part of the drain lane. To decrease average ball time, move it to the right.

Instant 2-Ball Play — Making the ramp shot from the plunger or during play locks a ball in the White House. Completing the drop target 5-bank with a ball locked awards instant 2-ball play. During 2-ball play, making the ramp shot, Spy Bar eject, or the ball eater initiates 2X scoring for a timed interval.

Drop Target 5-Bank — Making a drop target starts a variable countdown timer which, when elapsed, resets the drop targets. An audio warning and countdown occurs before the drop targets are reset, to let the player know that time is almost expired. Completing the 5-bank advances lighting and awarding of Instant 2 Ball, Extra Ball, Bonus Holdover, and 100K.

Target 3-Bank — Complete 3-Bank stand-up targets to light grid rows. Making target with flashing light first awards shortcut lighting of all lights. Lighting first lit row raises ball eater in KGB Hideout; make KGB Hideout shot to lock ball. This provides Instant 3-Ball play. Completing three (adjustable) targets during 3-Ball play lights left or right outlanes alternately for Special. Only one Special may be awarded per game. Making ramp shot during 3-Ball play scores Jackpot and Hideout values.

Super Spinner — Left flipper return lane lights right Super Spinner; right flipper return lane lights left Super Spinner. Super Spinner lites for decreasing values starting at 1,000 (adjustable). Making Super Spinner scores and locks in value. Super Spinner Bonus awarded at the end of game is the locked spinner value multiplied by the number of spinner turns.

Laser Kickback — Game starts with kickback lit. Ball entering left outlane with kickback lit is returned and kickback light goes off. Making Spy Bar eject (adjustable) or ramp shot (adjustable) relights kickback. Kickback relights (adjustable) at beginning of second and subsequent balls.

S-P-Y Lanes — Completing S-P-Y advances lighting of 2X, 3X, 4X, and 5X bonus multipliers and (adjustable) Extra Ball. Making ramp shot light or green bullet target spots S-P-Y.

Memory — The following features are held over from ball to ball: S-P-Y lanes (adjustable), Outlane Special (adjustable), 3-Bank Target grid (adjustable), Spy Bar (eject) lamps (adjustable).

AUDIT FUNCTIONS

GENERAL

There are 50 audit functions provided for accounting purposes and for evaluation of game difficulty adjustments. The various auditing functions are summarized in the **Auditing Features Table** and, when accessed, are shown on the player score displays. The **Audit Number** is shown in the Player 3 Display, the **Description** in the Player 1 and 2 Displays, and the **Audit Total** in the Player 4 Display. Access and control is provided from switches located on the inside of the coin door.

To access audit functions the game must be in the game-over mode. Open the coin door and make sure that the FORWARD/REVERSE switch is in the FORWARD (up) position. Depress the STEP switch and the game name is shown in the Player 1 and 2 displays, the Player 3 display is blank, and the PROM revision level is shown in the Player 4 display. This indicates access to audit functions.

With the FORWARD/REVERSE pushbutton switch still in the FORWARD (up) position, depressing the STEP pushbutton switch advances through the audit functions one at a time. To review lower-numbered functions, set the FORWARD/REVERSE pushbutton switch to the REVERSE (down) position and operate the STEP pushbutton switch.

Audit totals may be reset to zero using Game Adjustment Ad 46 Audits Reset. Game adjustments (Ad01-55) begin after the last audit function (AU 50). Once audits functions have been recorded, and if no adjustments are required, you may return the game to the attract mode. If adjustments are required, continue pressing the STEP button until the game adjustments are reached. See Game Adjustments for details.

STANDARD FUNCTIONS

Paid Credits (AU 01 through 04)

These four audit totals are provided to show the amount of coins registered and the total in the cashbox. **AU 01**, **02**, and **03** display the number of coins for the left, center, and right coin chutes, respectively. **AU 04** displays the total number of paid credits.

Total and Free Credits (AU 05 through 14)

Total credits (**AU 05**) is the sum of Paid Credits (**AU 04**) and free credits (**AU 06**). Note that free credits are not recorded in the audits until they are actually used.

Percentage of Free Credits (**AU 07**) is Free Credits (**AU 06**) divided by Total Credits (**AU 05**).

Replay awards (**AU 08**) is the total awards (credits, extra balls, or audit only) for exceeding replay score levels.

Percentage of Replay Awards (**AU 09**) is Replay Awards (**AU 08**) divided by Total Credits (**AU 05**).

Special Awards (**AU 10**) is the total awards (credits, extra balls, or points) for specials.

Percentage of Special Awards (**AU 11**) is Special Awards (**AU 10**) divided by Total Credits (**AU 05**).

Credits for Match (**AU 12**) is the total credits awarded for matching the last two digits of the score with the system-generated Match Number at the end of the game. Percentage of match credits will be approximately 10%, if enabled.

High Score Credits (**AU 13**) is the total credits awarded for exceeding the high score levels.

Percentage of High Score Credits (**AU 14**) is **AU 13** divided by Total Credits (**AU 05**).

Number of Balls and Average Times (AU 15 through AU 19)

Extra Balls (**AU 15**) is the total number of extra balls awarded.

Percentage of Extra Balls (**AU 16**) is **AU 15** divided by Total Balls Played (**AU 19**).

Average Ball Time (in seconds) (**AU 17**) is Total Play Time (in minutes) (**AU 18**) divided by Total Balls Played (**AU 19**) with the result multiplied by 60.

Total Play Time (**AU 18**) is the cumulative time of balls in play (in minutes).

Total balls played (**AU 19**) is the total of regular and extra balls.

Replay Awards (AU 20 through 23) provide the total awards (credit, extra ball, or audit) for each of four replay levels.

Game Summary (AU 24 through 27) provide individual totals of 1-player, 2-player, 3-player, and 4-player games.

Burn In Cycles (AU 28) provides the number of diagnostic burn-in cycles (factory use).

Attract Mode Cycles (AU 29) provides the number of cycles through the attract mode (factory use).

High Score Auto Resets (AU 30) provides the number of times that the high score levels have been automatically reset (if enabled).

GAME SPECIFIC FUNCTIONS

Ramp Shots (AU 31) provides the number of times that the ramp shot has been made.

Instant 2 Ball (AU 32) provides the number of times that 2-ball play has been awarded from the drop targets.

Ex Ball Drops (AU 33) provides the number of extra balls awarded from the drop targets.

Bonus Drops (AU 34) provides the number times that bonus was held over from the drop targets.

100K Drops (AU 35) provides the number of times 100,000 points was awarded from the drop targets.

Left Spinner (AU 36) provides the number of times that the left super spinner was scored.

Right Spinner (AU 37) provides the number of times that the right super spinner was scored.

Shortcut (AU 38) provides the number of times that shortcut lighting of the 3-bank targets was achieved.

All 9 Lights (AU 39) provides the number of times all nine 3-bank lights were lit.

Instant 3 Ball (AU 40) provides the number of times Instant 3-ball play was achieved.

Lvl 3 Target (AU 41) provides the number of times that instant 3-ball play was lit from the 3 stand-up targets.

Special Lit (AU 42) provides the number of times the Special was lit from the 3-bank.

Special Scored (AU 43) provides the number of time the Special was scored.

Not Used (AU 44)

Spy Bar Scored (AU 45) provides the number of times that the Spy Bar eject was made when lit.

Kck Scr (AU 46) provides the number of times that the Laser Kick has kicked the ball.

Kck Lit (AU 47) provides the number of times that the Laser Kick was relit.

Drain Left (AU 48) provides the number of balls lost through the left drain.

Drain Center (AU 49) provides the number of balls lost through the center drain.

Drain Right (AU 50) provides the number of balls lost through the right drain.

Jackpot Shot, (AU 51) provides the number of jackpot shots made.

GAME ADJUSTMENTS

GENERAL

There are 55 adjustable functions provided to vary difficulty of play and to periodically reset audits and high score levels. The various game adjustments are summarized in the **Game Adjustments Table** and, when accessed, are shown on the player score displays. The **Adjustment Number** is shown in the player 3 display, the **Description** in the Player 1 and 2 Displays, and the **Setting** in the Player 4 Display. Access and control is provided from switches located on the inside of the coin door.

Game adjustments are accessed from the audit mode. With the audits displaying game identification and the FORWARD/REVERSE switch in the REVERSE (down) position, depress the STEP switch and Ad 55 (Adjustment 55) is shown in the the Player 3 display, RESTORE FACTORY is shown in the Player 1 and 2 displays, and OFF is shown in the Player 4 display. With the audits displaying AU 50 and the FORWARD/REVERSE switch in the FORWARD (up) position, depress the STEP switch and Ad 01 is shown in the the Player 3 display, AUTO/FIXED REPLAY is shown in the Player 1 and 2 displays, and the setting is shown in the Player 4 display.

With the FORWARD/REVERSE pushbutton switch in the FORWARD (up) position, depressing the STEP pushbutton switch advances through the game adjustments one at a time. With it in the REVERSE (down) position, the STEP pushbutton switch selects lower-numbered adjustments. To rapidly scroll through adjustments, hold the STEP pushbutton switch depressed. Adjustment values are changed by operating the GAME START pushbutton switch and the FORWARD/REVERSE pushbutton switch setting determines whether the values are increased or decreased. When the STEP pushbutton switch is depressed the Player 1 and 2 displays indicate REQUEST INSTALLED.

NOTE

To lock in any adjustment, the game must be returned to game over mode by pushing STEP button with Ad 55 displayed.

REPLAY AND GENERIC FEATURES

Replays may be adjusted either for fixed levels or for a system-adjusted automatic percentage of replay awards. Four levels may be selected. Adjustments allow awarding of a credit or an extra ball as each level is exceeded. With the automatic feature, replay percentages are monitored and adjusted to maintain a preset percentage of replay level awards.

REPLAYS (Ad 01 through 06)

Ad 01 Automatic/Fixed Replay

Automatic: Adjust for percentage of awards for replay levels (1% through 50%). Proceed to ad 02 and 03 for starting replay levels.

Fixed: Lower the automatic value below 1% and Player 1 display indicates FIXED. Proceed to Ad 02 through 05 for fixed replay levels.

Ad 02 Replay Start/Replay 1

Automatic: With Ad 01 set for automatic, adjust the starting Replay 1 setting to between 800,000 and 9,900,000.

Fixed: With Ad 01 set for fixed, adjust Replay 1 level to between 100,000 and 9,900,000. To disable Replay 1, lower the setting to 00.

Ad 03 Replay Levels/Replay 2

Automatic: With Ad 01 set for automatic, adjust the number of replay levels to be active (1 to 4). Any additional starting replay levels are automatically set to values higher than Replay 1. Proceed to Ad 06.

Fixed: With Ad 01 set for fixed, adjust Replay 2 level to between 100,000 and 9,900,000. To disable Replay 2, lower the setting 00.

Ad 04 Replay 3 (Fixed Only) - With Ad 01 set for fixed, adjust Replay 3 level to between 100,000 and 9,900,000. To disable Replay 3, lower the setting to 00.

Ad 05 Replay 4 (Fixed only) - With Ad 01 set for fixed, adjust Replay 4 level to between 100,000 and 9,900,000. To disable Replay 4, lower the setting to 00.

Ad 06 Replay Award - Set for replays to award: CREDIT, EXTRA BALL, or AUDIT (no award but recorded in the audit totals).

Ad 07 Special Award - Set for Special to award: CREDIT, EXTRA BALL, or SCORE LEVEL.

Ad 08 Match Feature - Set the Match feature ON or OFF.

Ad 09 Balls Per Game - Adjust the number of balls per game; 2 to 9.

Ad 10 Tilt Warning - Adjust the number of plumb bob tilt switch closures before the ball in play is tilted; 1 to 5.

Ad 11 Maximum Extra Balls - Adjust for the maximum number of extra balls that may be accumulated per ball; 1 to 9 or OFF.

Ad 12 Maximum Credits - Adjust the maximum number of credits that may be posted; 5 to 99.

HIGH SCORE LEVELS (Ad 13 through 18)

There are four high score levels with associated player initials that are displayed during the attract mode. When players exceeds these levels, the player initials may be entered to replace the previous ones. These levels may be adjusted to award credits and to be reset to factory settings after a selected number of games. Note that these reset values are not ADJUSTABLE.

Ad 13 Highest Scores - Set to enable or disable the four high score levels; ON or OFF.

Ad 14 High Score Credits Level 1 - Adjust the number of credits awarded for exceeding level 1; 0 to 9.

Ad 15 High Score Credits Level 2 - Adjust the number of credits awarded for exceeding level 2; 0 to 9.

Ad 16 High Score Credits Level 3 - Adjust the number of credits awarded for exceeding level 3; 0 to 9.

Ad 17 High Score Credits Level 4 - Adjust the number of credits awarded for exceeding level 4; 0 to 9.

Ad 18 High Score Reset - Adjust the number of games between automatic resets of high score levels to factory settings and ball time averager adjustments; 1,000 to 99,000 or OFF (no reset or adjustment).

Ad 19 Free Play - When set to ON, no coins are required for games.

GAME PRICING (Ad 20 to 25)

There are two methods available for coin switch programming; Standard and Custom. Standard pricing uses a single adjustment (Ad 20) to select a pricing scheme shown in the **Standard Pricing Table**. Custom pricing is used to select additional pricing schemes defined by Ad 21 to 25. In order to program Ad 21 to 25, Ad 20 must be set to CUSTOM.

With Ad 20 set to CUSTOM, Ad 21, 22, and 23 represent coin switch units for the left, center, and right coin slots. Ad 24 prescribes the number of units required for one credit. For example, if Ad 21 was set to 02 and Ad 24 to 01, a coin in the left slot would produce two credits. Further, if Ad 21 was set to 01 and Ad 24 to 02, two coins in the left slot would be required for one credit.

Ad 25 may be set to post bonus credits when a minimum amount of coins are inserted at one time. For example, if Ad 21 was set to 01, Ad 24 to 01, and Ad 25 to 04, one credit would be posted for each of the first three coins in the left slot and two credits for the fourth coin.

Ad 20 Standard Pricing Select - Set for the desired pricing scheme from the **Standard Pricing Table** as indicated in the Player 1 and 2 Displays. For Custom Pricing, set to CUSTOM. When set to CUSTOM, Ad 21 to 25 must be adjusted.

Ad 21 Left Coin Switch Units - Set the number of units registered for closure of the left coin switch; 00 to 99.

Ad 22 Center Coin Switch Units - Set the number of units registered for closure of the center coin switch; 00 to 99.

Ad 23 Right Coin Switch Units - Set the number of units registered for closure of the right coin switch; 00 to 99.

Ad 24 Coin Switch Units Required for 1 Credit - Set the number of coin switch units required to post one credit; 00 to 99.

Ad 25 Coin Switch Units Required for Bonus Credit - Set the number of coin switch units required to award a bonus credit; 00 to 99.

5-BALL/NOVELTY PLAY (Ad 26 to 28)

These three INSTALL adjustments may be activated to automatically select settings for multiple adjustments. After activation, the individual adjustments may be readjusted if desired.

Ad 26 Install Add-A-Ball - Set to disable awarding of credits, replacing replay and Special awards with an extra ball; ON or OFF. If ON the following settings are established:

Ad 06 Replay Awards = Extra Ball
Ad 07 Special Awards = Extra Ball
Ad 08 Match Feature = Off
Ad 13 Highest Scores = OFF
Ad 14 to 17 High Score Credits = 00

Ad 27 Install 5-Ball Play - Set to establish recommended settings for 5-ball play; ON or OFF. If ON the following settings are established:

Ad 01 Automatic Replay = 7%	Ad 39 Ramp Spots S-P-Y Lanes = OFF
Ad 02 Replay Start = 3,000,000	Ad 41 S-P-Y Lanes Lites Extra Ball = OFF
Ad 03 Replay Levels = 01	Ad 42 Targets for Special = 09
Ad 09 Balls/Game = 05	Ad 43 Ramp Lites Kickback = OFF
Ad 34 Spy Bar Lites Kickback = OFF	Ad 44 Spinner Start Value = 1,000
Ad 35 S-P-Y Lane Memory = ON	Ad 45 Kickback Start = ON
Ad 36 Special Memory = OFF	Ad 51 Spy Bar Extra Ball Memory = OFF
Ad 37 Target Memory = ON	Ad 52 Up Post Timer = ON
Ad 38 Spy Bar Memory = ON	Ad 53 5-Bank Timer = Factory

Ad 28 Install Novelty Play - Set to establish settings for no free play or extra balls; ON or OFF. If ON the following settings are established:

Ad 01 Fixed Replay = Fixed
Ad 02 to 05 Replays 1 to 4 = 00
Ad 06 Replay Award = Audit
Ad 07 Special Award = Score 100K
Ad 08 Match Feature = OFF
Ad 11 Maximum Extra Balls = OFF
Ad 13 Highest Scores = OFF
Ad 14 to Ad 17 High Score Credits = 00

SINGLE-FUNCTION DIFFICULTY ADJUSTMENTS (Ad 29 to 33)

These five INSTALL adjustments may be activated to automatically select settings for multiple adjustments affecting game difficulty. After activation, the individual adjustments may be readjusted if desired. Refer to **Install Adjustment Table** for details.

Ad 29 Install Extra Easy - Set to ON or OFF.

Ad 30 Install Easy - Set to ON or OFF.

Ad 31 Install Medium - Set to ON or OFF.

Ad 32 Install Hard - Set to ON or OFF.

Ad 33 Install Extra Hard - Set to ON or OFF.

INSTALL ADJUSTMENT TABLE

Install Adjustment	Ad 29 Extra Easy	Ad 30 Easy	Ad 31 Medium	Ad 32 Hard	Ad 33 Extra Hard

GAME SPECIFIC ADJUSTMENTS (ad 34 to 45)

Ad 34 Spy Bar (eject) Lites Laser Kickback - Set to ON or OFF.

Ad 35 S-P-Y Lane Memory - Set to ON or OFF.

Ad 36 Special Memory - Set to ON or OFF.

Ad 37 Target Memory - Set to ON or OFF.

Ad 38 Spy Bar (eject) Memory - Set to ON or OFF.

Ad 39 Ramp Spots S-P-Y Lanes - Set to ON or OFF.

Ad 40 Attract Mode Music - Set to ON (once every seven attract mode cycles), OFTEN (every attract mode cycle), or OFF.

Ad 41 S-P-Y Lanes Lites Extra Ball (for completing S-P-Y lanes with 5X multiplier lit) - Set to ON or OFF.

Ad 42 Targets for Special - Number of 3-Bank target lamps that must be lit to light left and right outlanes for Special - Set to 3 through 9.

Ad 43 Ramp Shot Lites Laser Kickback - Set to ON or OFF.

Ad 44 Spinner Start Value - Set to 1000 through 5000.

Ad 45 Laser Kickback Start (turned on at the start of second and subsequent balls) - Set to ON or OFF.

ADDITIONAL GENERIC FEATURES (Ad 46 to 50)

Ad 46 Audits Reset - When enabled (set to ON) all audit totals will be reset to zero when STEP is depressed with FORWARD/REVERSE button in the FORWARD position.

Ad 47 Coin Reset - When enabled (set to ON) all coin and paid credit totals will be reset to zero when STEP is depressed.

Ad 48 High Score Level Reset - When enabled (set to ON) the High Score Levels and associated initials will be restored to factory settings when STEP is depressed with FORWARD/REVERSE button in the FORWARD position.

Ad 49 Custom Message - When desired, this function is used to establish a custom message periodically displayed during the attract mode. Set the feature ON using the Credit button and depress STEP. The letter A is indicated in the first position of the Player 1 display. Vary the letter by operating the left and right flippers. With the desired letter indicated, depress the Credit button to lock in the letter and advance to the next display character. Repeat this procedure until the desired message is indicated in the Player 1 and 2 displays. At this time, depress the STEP pushbutton switch to advance to Ad 50.

NOTE

To lock in the custom message, the game must be returned to Game Over by depressing STEP with Ad 55 displayed.

Ad 50 English/German/French Text - Select English, German, or French for display during Audits, Adjustments, and Game Diagnostics.

ADDITIONAL GAME SPECIFIC FEATURES (Ad 51 to 53)

Ad 51 Spy Bar Extra Ball Memory - Set to ON or OFF.

Ad 52 Up Post Timer - Set to EASY (longest duration), FACTORY (post does not come up at all) or HARD (shortest duration).

Ad 53 5-Bank Timer - Sets time allowed to complete 5-bank before the bank is reset. Set to EASY, FACTORY, or HARD.

Ad 54 Ball Time Averager - Maintains average ball time close to 70 seconds. Every 1,000 (vary with Ad 18) games, average is checked. If greater than 70 seconds, Ad 52 is set (adjustable) to HARD and Ad 45 is set to OFF. If less than 70 seconds, Ad 52 is set to EASY and Ad 45 is set to ON.

Ad 55 Average Ball Time - Sets the average ball time. Set to between 50 and 80 seconds.

Ad 56 Install Factory - Depressing STEP without changing the value shown in the Player 4 display from OFF locks in any custom message set with Ad 49 and returns the game to Game Over. Set the value to ON and depress STEP to revert all game adjustments to factory settings; depress STEP a second time to return to Game Over.

GAME DIAGNOSTICS

The Data East Pinball system provides tests for sounds, digital displays, lamps, switches, and solenoids. Each feature may be tested manually or automatically using the STEP and FORWARD/REVERSE pushbutton switches inside the coin door and the Game Start pushbutton switch on the front of the cabinet. The automatic tests may be used for a quick verification of automatic test functions and the manual tests for troubleshooting.

During game play, activation of switches and operation of coils with associated switches are monitored. If a switch is not made for 100 games it is considered bad. When operation of a coil should close or open a switch and does not, the coil is considered bad. Each time the game is powered up, bad switches and coils are reported. Note that reporting of an unused switch does not constitute a problem and that a bad coil could mean that the associated switch requires adjustment.

ENTERING DIAGNOSTICS

With the game in the game-over mode, open the coin door and make sure that the FORWARD/REVERSE pushbutton switch is set to REVERSE (down) and depress the STEP pushbutton switch. The Player displays will show the toll-free Customer Service number 1-800-KICKERS, that is 1-800-542-5377 (outside Illinois) and the toll number (312) 345-7700 (inside Illinois). This indicates entry into game diagnostics.

SOUND TESTS

The Data East Pinball sound system produces true digital stereo sound on left and right speakers and mono on a center speaker. During Sound tests, the Player 1 and 2 displays show the sound board circuit under test and the corresponding sounds are produced. Refer to the **Sound Test Chart** for the sound circuits displayed and the sounds produced. The sine wave functions allow verification that all channels are functioning properly and that the speaker connections are correct. Speaker Phase Testing procedures follow for checking speaker connections.

Automatic Test

With Customer Service telephone numbers displayed, depress the STEP pushbutton switch. Player 1 and 2 displays indicate SOUNDS AUTO and the system sequences through the test producing the sounds indicated in the Sound Test Chart.

Manual Test

Operate the STEP pushbutton switch during the Automatic tests until SOUNDS MANUAL is indicated in the Player 1 and 2 displays. Depressing the Game Start pushbutton switch allows you to advance through each sound function.

Speaker Phase Testing

Connections to each of the three speakers are polarized and each must be connected appropriately for the best quality sound. If one speaker has the positive and negative connections reversed with respect to the other two, bass frequencies will not be produced properly and the overall sound quality will be poor.

To test for proper speaker phasing, use the manual sound test to cycle through the Left, Center, and Right Sine functions. If the Center Sine produces more volume and bass than the Left and Right Sines, the speakers are connected properly. If it produces the same or less, one speaker is connected improperly. To isolate and correct reversed speaker connections, one of two methods may be used.

1. Check each speaker for polarity markings. If the speakers have polarity markings, verify that the single-color wire (BLK, YEL, or RED) is connected to the negative (-) terminal.
2. Disconnect the speaker output connector from the Sound Board and connect a 1.5-volt battery across each speaker pair one at a time while observing the speakers. Make sure that the positive battery terminal is connected to the positive lead (CN1-pin 1, 3, or 6) each time. As the connection is made, check speaker cone movement; proper connections are indicated by outward movement.

SOUND TEST CHART

Auto/Manual Tests (Player 1 & 2)	Sounds Produced
LEFT SINE	60 CYCLE TONE (Left Speaker Only)
CENTER SINE	60 CYCLE TONE (All Speakers)
RIGHT SINE	60 CYCLE TONE (Right Speaker Only)
VOICE ROM 1 (Loc F6)	boing, KGB HIDEOUT, door slam, ricochet
VOICE ROM 2 (Loc F4)	2 BALL, BABY YOU'RE THE BEST, crash noise
MUSIC TEST (Sound ROM Loc F7)	SUPER SPINNER, ESCAPE, OOOH!. COMING IN FOR JACKPOT SHOT, ROGER AIR FORCE 1 RAMP CLEARED FOR JACKPOT, laugh, sounds <i>NOBODY DOES IT BETTER</i> MUSIC

DIGITAL DISPLAY TEST

Digital displays are driven by digit and segment driver circuits. Digit drivers sequentially select individual character positions (Player 1 and 2 displays) and digit positions (Player 3 and 4 displays). Segment drivers (16 for Player 1 and 2 characters; 7 for Player 3 and 4 digits) select the individual segments of each position.

Automatic Test

To enter Display tests, operate the STEP pushbutton switch from the Sound Manual test. Player 1 and 2 displays indicate DISPLAY AUTO. The displays will sequence from all ZEROS to all nines in the four displays. Next all segments are lit for each digit position in sequence.

Manual Test

Operate the TEST pushbutton switch from the automatic test; Player 1 and 2 displays indicate DISPLAY MANUAL and then display ZEROS in all positions. Operate the Game Start pushbutton switch to cycle through each portion of the test.

SWITCH TEST

Switches are configured on an 8 x 8 matrix of columns (switch drives) and rows (switch returns) with up to 64 switches possible. The switch tests include three parts; switch test, active switches, and bad switches.

Switch Test

From the Display Manual test, operate the STEP pushbutton switch. Player 1 and 2 displays indicate SWITCH TEST. Close each switch and observe the displays. The Player 1 and 2 displays will indicate the switch name and the Player 4 display indicates the switch number. When a switch is released, the name disappears but the switch number remains until another switch is closed or the test is exited.

Active Switches

Operate the STEP pushbutton switch from the Switch Test. Player 1 and 2 displays indicate ACTIVE SWITCHES. If any switches are stuck closed (or made from the presence of a ball), the Player 1 and 2 displays sequence through switch names and the switch numbers are indicated in the Player 4 display. This cycle continues until all switches are cleared or until the STEP pushbutton switch is depressed.

Bad Switches

Operate the STEP pushbutton switch from the Switch Test. Player 1 and 2 Displays indicate BAD SWITCHES. During game play, the system keeps track of the last game in which each switch was made. Should a switch not be made for 100 games, it is considered to be bad. If there are any, the Player 1 and 2 displays sequence through switch names and the switch numbers are indicated in the Player 4 display. This cycle continues until the STEP pushbutton switch is depressed.

LAMP TESTS

Controlled lamps are configured on an 8 x 8 matrix of columns (lamp drives) and rows (lamp returns) with up to 64 lamps possible. The lamp tests include four parts, all lamps, lamp return (row), lamp drive (column), and discrete lamps.

All Lamps

From the Bad Switch test, operate the STEP pushbutton switch. Player 1 and 2 displays indicate ALL LAMPS and all controlled lamps will light.

Lamp Returns

From the ALL LAMPS test, depress the STEP pushbutton switch. Player 1 and 2 displays indicate LAMP ROWS and the Player 4 display indicates 01 for row 1. All controlled lamps in row 1 should be lit. Operating the Game Start pushbutton switch cycles through each of the rows separately.

Lamp Drives

From the LAMP ROWS test, depress the STEP pushbutton switch. Player 1 and 2 displays indicate LAMP COLUMNS and the Player 4 display indicates 01 for column 1. All controlled lamps in column 1 should be lit. Operating the Game Start pushbutton switch cycles through each of the columns separately.

Discrete Lamp

From the LAMP COLUMNS test, depress the STEP pushbutton switch. Player 1 and 2 displays indicate LAMP TEST and then the name assigned to lamp 01; Player 4 display indicates 01. Lamp 01 should light. With the FORWARD/REVERSE pushbutton switch in the FORWARD (up) position, operating the Game Start pushbutton switch selects higher-numbered lamps; with it in the REVERSE (down) position, Game Start selects lower-numbered lamps.

PLAYFIELD LAMPS

COIL TEST

Sixteen regular (pulsed under microprocessor control) and six switch-triggered coil drivers are provided to switch ground to coils. Coil number 10 is used in conjunction with drives 1 through 8 to switch +34 volts between coils or flash lamps; these sets are termed "left" and "right". Coil number 10 is located on the MRB board which provides isolation diodes and current limiting and heater resistors. This effectively provides 23 regular coils.

There are two coil tests for testing the regular coils; COIL TEST and SELECT COIL. The first test sequentially pulses each coil and the second pulses a selected coil repeatedly. Pop bumper and slingshot coils are switch-triggered and may be tested by closing the associated switch triggers.

Automatic Test

From the Discrete Lamps test, depress the STEP pushbutton switch. Player 1 and 2 displays indicate COIL TEST. The test pulses each regular solenoid or flash lamp sequentially with the coil/flash lamp name indicated in the Player 1 and 2 displays and the drive number in the Player 4 display.

Select Coil

From the Coil Test, depress the STEP pushbutton switch. Player 1 and 2 displays indicate SELECT COIL and then the name of drive 1L, the drive number is indicated in the Player 4 display. Operate the Game Start pushbutton switch to select the coil or flash lamp to be tested. With the desired drive number indicated in the Player 4 display, depress the STEP pushbutton switch to cause it to be pulsed repeatedly.

RETURN TO GAME OVER

From the Select Coil test, depress the STEP pushbutton switch one time if a selected coil is pulsing or two times none is pulsing. The game returns to the game-over mode.

Coil Number Description
